Executive Summary

Founded in 1974, Delano Regional Medical Center (DRMC) is a not-for-profit hospital with 156 licensed beds. It serves rural central California towns in Kern County and Tulare County. As required by state and federal law, Delano Regional Medical Center has undertaken a Community Health Needs Assessment (CHNA). California Senate Bill 697 (SB 697) and the Patient Protection and Affordable Care Act through the IRS section 501(r)(3) regulations direct nonprofit hospitals to conduct a Community Health Needs Assessment and develop an Implementation Strategy every three years. The purpose of this Community Health Needs Assessment is to identify and prioritize significant health needs of the community served by Delano Regional Medical Center. The health needs identified in this report help to guide the hospital's community benefit activities.

The Community Health Needs Assessment process was supported by the Kern County Community Benefit Collaborative. The Collaborative is comprised of Delano Regional Medical Center, Dignity Health (Mercy and Memorial Hospitals), Kern Medical, Adventist Health (Bakersfield and Tehachapi Valley), Valley Children's Healthcare and Kaiser Permanente.

Project Oversight

The Community Health Needs Assessment process was overseen by:

Matthew Cauthron

Director - *Business Development, Marketing,
& Community Relations*

Delano Regional Medical Center

Consultant

Biel Consulting, Inc. conducted the Community Health Needs Assessment. Biel Consulting, Inc. has extensive experience conducting hospital Community Health Needs Assessments and working with hospitals on developing, implementing, and evaluating community benefit programs. Dr. Melissa Biel conducted the DRMC Community Health Needs Assessment. She was assisted by Denise Flanagan, BA and Sevanne Sarkis, JD, MHA, MEd. Biel Consulting's website is www.bielconsulting.com.

Community Definition

Delano Regional Medical Center is located at 1401 Garces Highway, Delano, California, 93215. The service area for the hospital includes six communities consisting of four ZIP Codes in Kern County and two ZIP Codes in Tulare County. Over 70% of inpatient discharges constitute the hospital service area.

Assessment Process and Methods

Secondary and primary data were collected to complete the CHNA. Secondary data were collected from a variety of local, county and state sources to present a demographic profile, social determinants of health, health care access, birth indicators, leading causes of death, acute and chronic disease, health behaviors, mental health, substance use and misuse, and preventive practices. The analysis of secondary data yielded a preliminary list of significant health needs, which then informed primary data collection. The following criteria were used to identify significant health needs:

1. The size of the problem (relative portion of population afflicted by the problem)
2. The seriousness of the problem (impact at individual, family, and community levels)

Primary data were obtained through community surveys and interviews with 41 key community stakeholders, public health, and service providers, members of medically underserved, low-income, and minority populations in the community, and individuals or organizations serving or representing the interests of such populations. The primary data collection process was designed to validate secondary data findings, identify additional community issues, solicit information on disparities among subpopulations, ascertain community assets potentially available to address needs and discover gaps in resources.

Significant Health Needs

The community stakeholders were asked to prioritize the significant health needs according to highest level of importance in the community. A brief description of the significant health needs listed in priority order follows:

1. **Housing and homelessness** – 45.4% of service area families spend 30% or more of their income on housing. In Kern County, there was a 9% increase in homelessness from 2017 to 2018, and a 46% increase in the number of unsheltered homeless. Tulare County experienced a 6% increase in homelessness from 2016 to 2017 (666 in 2017 vs. 631 in 2016). Tulare County has the largest percentage of their homeless population living in unsheltered situations (84%). Many stakeholders commented there are not enough homeless housing resources in Kern County.
2. **Mental health** – Among adults in Kern County, 12% had experienced serious psychological distress in the past year. 10.7% of Tulare County adults had experienced serious psychological distress in the past year. Stakeholders commented on the lack of county resources available to address mental health issues. As well, there continues to be a stigma associated with mental illness.
3. **Access to care** – Health insurance coverage is a key component to accessing health care. The Healthy People 2020 objective is for 100% insurance coverage for all population groups. The service area has 81.8% insurance coverage across all ages, which is lower than Kern County (86.7%), Tulare County (85.1%) and state (87.4%) rates. 5.7% of Kern County adults had difficulty finding a primary-care doctor and 11.3% had difficulty obtaining specialty care. 7.3% of Tulane County adults had difficulty finding a primary-care doctor and 13.4% had difficulty obtaining specialty care.
4. **Economic insecurity** – Among residents in the service area, 32.1% are at or below 100% of the federal poverty level (FPL) and 65.9% are low-income (200% of FPL or below). These poverty rates are higher than county and state rates. 44.5% of service area children live in poverty. Among service area seniors, 18.8% are living in poverty.
5. **Substance use and misuse** – In Kern County, 14.6% of adults smoke cigarettes and 14.6% of Tulare County adults smoke cigarettes. These rates are higher than the state rate (12.1%) and the Healthy People 2020 objective (12%). The rate of hospitalizations due to opioid overdose was 11.9 per 100,000 persons in Kern County and 12.5 per 100,000 persons in Tulare County. This is higher than the state rate (7.6 per 100,000 persons). Community members noted increases in meth and opioid use and the increase in vaping among the youth.
6. **Chronic diseases** – Heart disease and cancer are the top two causes of death in the service area. Stroke is the fourth-leading cause of death and Chronic Lower Respiratory Disease (CLRD) is the fifth-leading cause of death. Kern County has the highest rate of Valley Fever in California. Rates of Valley Fever in Kern County have risen from a low of 106.2 in 2014, to 305.7 cases per 100,000 residents in 2017. The rate of Valley Fever is 58.2 per 100,000 persons in Tulare County.
7. **Environmental pollution** – In 2016, Kern County had 78 days with ground-level ozone concentrations above the U.S. standard of 0.070 parts per million. This is

compared to the state, which had 22 days of high ground-level ozone concentrations during the same time period. Stakeholders noted the poor air quality in the county and the high rates of pesticide use, which impact the health of the residents.

8. **Food insecurity** – Among the population in Kern County, 13.6% experienced food insecurity during the past year. 13% of Tulare County residents experienced food insecurity. Among children in Kern County, 25% lived in households that experienced food insecurity. 26.7% of Tulare County children lived in households that experienced food insecurity at some point in the year. The rate of food insecurity was higher in Kern County and Tulare County than in the state. Community members noted those who live in rural areas, seniors and children are disproportionately impacted by food insecurity.
9. **Sexually transmitted infections (STIs)** – Rates of STIs are climbing rapidly in Kern County and all STI rates in Kern County exceed state rates. The rate of congenital syphilis is also rising swiftly. In Kern County, there were 172.7 cases per 100,000 births. In Tulare County, the rate of congenital syphilis was 67.8 per 100,000 births. The Healthy People 2020 objective for congenital syphilis is 9.6 cases per 100,000 births. A community stakeholder noted, “We have seen an increase in our population with syphilis. Pregnant women are coming in to have their babies and they test positive for syphilis.”
10. **Violence and injury** – In the service area, the age-adjusted death rate from homicides was 12.9 per 100,000 persons. This rate was higher than the state rate for homicides. The Healthy People 2020 objective for homicide is 5.5 per 100,000 persons. Calls for domestic violence are categorized as with or without a weapon. 38.1% of domestic violence calls in Kern County and 24.9% in Tulare County involved a weapon.
11. **Preventive practices** – The Healthy People 2020 objective is for 70% of the population to receive a flu shot. 44.1% of Kern County adults and 44.8% of Tulare County adults received a flu shot. The Healthy People 2020 objective for mammograms is for 81% of women, 50 to 74 years old, to have had a mammogram within the past two years. In Kern County, 78.6% of women obtained a mammogram. 82.6 % of Tulare County women received a mammogram.
12. **Dental care** – 2.4% of county residents have never been to a dentist and 11.8% have not visited a dentist for five or more years. 2.3% of Tulare County residents have never been to a dentist and 12.5% have not visited a dentist for five or more years. Community members explained, “There is a lack of access due to insufficient insurance and Medi-Cal coverage for dental services. There is a lack of dentists who take Medi-Cal, and a lack of specialists. And it is unaffordable.”
13. **Birth indicators** – 75.4% of women accessed prenatal care in the first trimester. This does not meet the Healthy People 2020 objective of 78% of women entering prenatal care in the first trimester. The infant mortality rate was 6.8 deaths per 1,000

live births in Kern County and 5.8 deaths per 1,000 live births in Tulare County. These rates were higher than the state rate (4.6 deaths per 1,000 live births). The Healthy People 2020 objective is 6.0 deaths per 1,000 births.

14. **Overweight and obesity** – In Kern County, 40.7% of adults, ages 20 and older, are obese. 20.6% of Kern County teens are obese. In Tulane County, 34.7% of adults, ages 20 and older, and 30.2% of teens are obese. The Healthy People 2020 objectives for obesity are 30.5% of adults, ages 20 and over, and 16.1% of teens. Stakeholders noted the easy availability of fast food in the community and the high cost of fresh produce and healthy foods.
15. **Alzheimer’s disease** – The mortality rate from Alzheimer’s disease in the service area was 31.1 per 100,000 persons. This is lower than the Kern County rate (50.5) and the state rate (35.5 per 100,000 persons). A community stakeholder noted, “It is very common that families are not able to effectively care for their loved ones due to the high cost of treating or caring for them. A lot of families have to quit their jobs to stay home and care for a loved one because they do not have other options.”
16. **Unintentional injuries** – Unintentional injury is the third highest cause of death in the service area. The age-adjusted death rate from unintentional injuries in the service area was 35.4 per 100,000 persons. The death rate from unintentional injuries in the service area is lower than the Healthy People 2020 objective of 36.4 deaths for unintentional injuries per 100,000 persons. Stakeholders noted there are high rates of motorcycle collisions and pedestrians being hit by motor vehicles.

Report Adoption, Availability and Comments

This CHNA report was adopted by the DRMC Board of Directors on May29, 2019.

This report is widely available to the public on the hospital’s web site, <http://www.drmc.com/about-drmc/community-benefits-reports.php>. Written comments on this report can be submitted to DRMC-CHNA@drmc.org.

Introduction

Background and Purpose

Delano Regional Medical Center (DRMC) is a full-service community and regional hospital governed by the Central California Foundation for Health. Founded in 1974, DRMC serves rural central California towns in Kern County and Tulare County. DRMC is a not-for-profit hospital with 156 licensed beds. Services include an Intensive Care Unit, Emergency Services, Outpatient Services, Sub-Acute Care Unit, Medical Surgical Unit, Obstetrics/Gynecology Unit and Surgical Pavilion. DRMC provides services through three rural health clinics: Delano Women’s Medical Clinic, Delano Urgent Care and Wasco Medical Plaza.

Delano Regional Medical Center has undertaken a Community Health Needs Assessment (CHNA) as required by state and federal law. California SB 697 and the Patient Protection and Affordable Care Act, through the IRS section 501(r)(3) regulations, direct tax-exempt hospitals to conduct a Community Health Needs Assessment and develop an Implementation Strategy every three years. This assessment incorporates primary and secondary data that focus on the health and social needs of the service area.

Service Area

Delano Regional Medical Center is located at 1401 Garces Highway, Delano, California 93215. The service area for the hospital includes six communities consisting of four ZIP Codes in Kern County and two ZIP Codes in Tulare County. Delano Regional Medical Center determines the community for the purposes of this CHNA by assigning ZIP Codes based on patient discharges. Over 70% of inpatient discharges constitute the hospital service area.

Delano Regional Medical Center Service Area

ZIP Code	Place*	County
93215	Delano	Kern
93250	McFarland	Kern
93263	Shafter	Kern
93280	Wasco	Kern
93219	Earlimart	Tulare
93261	Richgrove	Tulare

*When ‘Place Names’ are used within the report, they primarily refer to the geographic area covered by a ZIP Code, rather than the incorporated city that bears that name.

Collaborative Process

DRMC participated in a collaborative process for the Community Health Needs Assessment. The Kern County Community Benefit Collaborative is comprised of Delano Regional Medical Center, Dignity Health (Mercy and Memorial Hospitals), Kern Medical, Adventist Health (Bakersfield and Tehachapi Valley), Valley Children’s Healthcare and Kaiser Permanente. These hospitals share a service area. The collaborative effort reduced redundancies and increased data collection efficiency.

Secondary Data Collection

Secondary data were collected from a variety of local, county and state sources to present a community profile, social determinants of health, health care access, birth indicators, leading causes of death, acute and chronic disease, health behaviors, mental health, substance use and misuse, and preventive practices. When available, data sets are presented in the context of Kern County and California to help frame the scope of an issue, as it relates to the broader community.

Sources of data include: the U.S. Census American Community Survey, California Department of Public Health, California Health Interview Survey, Kern County Public Health Department, Healthy Kern County, County Health Rankings, California Department of Education, California Office of Statewide Health Planning and Development and California Department of Justice, among others.

Secondary data for the service area were collected and documented in data tables with narrative explanation. The tables present the data indicator, the geographic area represented, the data measurement (e.g. rate, number, or percent), county and state comparisons (when available), the data source, data year and an electronic link to the data source. Analysis of secondary data includes an examination and reporting of health disparities for some health indicators. The report includes benchmark comparison data that measure the data findings compared to Healthy People 2020 objectives, where appropriate. Healthy People 2020 objectives are a national initiative to improve the public’s health by providing measurable objectives and goals that are applicable at national, state, and local levels. Appendix 1 compares Healthy People 2020 objectives with service area data.

Primary Data Collection

For this Community Health Needs Assessment, information was obtained through community surveys and interviews with individuals who are leaders and/or representatives of medically underserved, low-income, and minority populations, local

health or other departments or agencies that have current data or other information relevant to the health needs of the community.

Interviews

Interviews were used to gather information and opinions from persons who represent the community served by the hospital. Given shared community areas, the Kern County Community Benefit Collaborative hospitals worked together to conduct the interviews. Forty-one (41) interviews were completed from October 2018 through March 2019.

The Kern County Community Benefit Collaborative developed a list of key influencers who have knowledge of community health and social needs. They were selected to cover a wide range of communities within Kern County, represent different age groups, racial/ethnic populations and underserved populations. The identified stakeholders were invited by email to participate in a phone interview. Appointments for the interviews were made on dates and times convenient to the stakeholders. At the beginning of each interview, the purpose of the interview in the context of the assessment was explained, the stakeholders were assured their responses would remain confidential, and consent to proceed was given.

Interview participants were asked to share their perspectives on a number of topics related to the identified preliminary health needs in the community area. Questions focused on the following topics:

- Major health issues facing the community.
- Socioeconomic, behavioral, environmental or clinical factors that contribute to poor health in a community.
- Issues, challenges, barriers faced by community members as they relate to the identified health needs.
- Services, programs, community efforts, resources available to address the health needs.
- Special populations or groups that are affected by a health need.
- Health and social services missing or difficult to access in the community.
- Other comments or concerns.

A list of the stakeholder interview respondents, their titles and organizations can be found in Attachment 2.

Community Survey

The Kern County Community Benefit Collaborative representatives developed a plan for distribution of a survey to engage community residents. The survey was available in an electronic format through a Survey Monkey link, and in a paper copy format. The electronic and paper surveys were available in English and Spanish. The surveys were

available from November 2018 to January 2019 and during this time, 1,114 usable surveys were collected.

Members of the Kern County Community Benefit Collaborative distributed the surveys to their clients, in hospital waiting rooms and service sites, and through social media, including posting the survey link on hospital Facebook pages. The survey was also distributed to community partners who made them available to their clients. A written introduction explained the purpose of the survey and assured participants the survey was voluntary, and they would remain anonymous. For community members who were illiterate, an agency staff member read the survey introduction and questions to the client in his/her preferred language and marked his/her responses on the survey.

The survey asked for respondents' demographic information. Survey questions focused on the following topics:

- Biggest health issues in the community.
- Greatest needs facing children and families.
- Where residents and their families receive routine health care services.
- Problems faced accessing health care, mental health care, dental care or supportive services.
- What would make it easier to obtain care?
- Types of support or services needed in the community.
- Safety concerns in the community

The summary survey report can be found in Attachment 3.

Interview and survey participants were also asked to provide additional comments to share with the hospitals. Analysis of the primary data occurred through a process that compared and combined responses to identify themes. The results of the primary data collection were reviewed in conjunction with the secondary data. Primary data findings were used to corroborate the secondary data-defined health needs, serving as a confirming data source. The responses are included in the following Community Health Needs Assessment chapters.

Public Comment

In compliance with IRS regulations 501(r) for charitable hospitals, a hospital Community Health Needs Assessment (CHNA) and Implementation Strategy are to be made widely available to the public and public comment is to be solicited. The previous Community Health Needs Assessment and Implementation Strategy were made widely available to the public on the website <http://www.drmc.com/about-drmc/community-benefits-reports.php>. To date, no comments have been received.

Identification and Prioritization of Significant Health Needs

Review of Primary and Secondary Data

Significant health needs were identified from secondary data using the size of the problem (relative portion of population afflicted by the problem) and the seriousness of the problem (impact at individual, family, and community levels). To determine size or seriousness of the problem, the health need indicators that were identified in the secondary data were measured against benchmark data; specifically, county rates, state rates and/or Healthy People 2020 objectives. Indicators related to the health needs that performed poorly against one or more of these benchmarks met this criterion to be considered a health need.

The following significant health needs were determined:

- Access to health care
- Alzheimer's disease
- Birth indicators
- Chronic diseases (asthma, cancer, diabetes, heart disease, kidney disease, liver disease, lung disease, stroke, Valley Fever)
- Dental care/oral health
- Economic insecurity
- Environmental pollution
- Food insecurity
- Housing and homelessness
- Mental health
- Overweight and obesity
- Preventive practices
- Sexually transmitted infections
- Substance use and misuse
- Unintentional injuries
- Violence and injury

Priority Health Needs

The list of significant health needs informed primary data collection. The primary data collection process was designed to validate secondary data findings, identify additional community issues, solicit information on disparities among subpopulations, ascertain community assets to address needs, and discover gaps in resources. Community stakeholder interviews were used to gather input and prioritize the significant health needs. The following criteria were used to prioritize the health needs:

- The perceived severity of a health issue or health factor as it affects the health and lives of those in the community;
- The level of importance the hospital should place on addressing the issue.

The stakeholders were asked to rank each identified health need. The percentage of responses were presented for those needs with severe or significant impact on the community, had worsened over time, and had a shortage or absence of resources available in the community.

Not all respondents answered every question; therefore, the response percentages were calculated based on respondents only and not on the entire sample. Among the interviewees, housing and homelessness, mental health and substance use and misuse received the highest scores for severe and significant impact on the community. Housing and homelessness, substance use and misuse, and violence and injury had the highest scores for worsened over time. Housing and homelessness, mental health, violence and injury, and economic insecurity received the highest scores for insufficient resources available.

Significant Health Need	Severe and Significant Impact on the Community	Worsened over Time	Insufficient or Absent Resources
Access to health care	79.0%	16.7%	68.4%
Alzheimer's disease	61.5%	30.8%	76.9%
Birth indicators	68.8%	14.3%	58.3%
Chronic diseases (asthma, cancer, diabetes, heart disease, kidney disease, liver disease, lung disease, stroke, Valley Fever)	89.4%	42.1%	77.8%
Dental care/oral health	73.3%	33.3%	68.8%
Economic insecurity	94.4%	50.0%	94.1%
Environmental pollution	94.1%	47.1%	88.2%
Food insecurity	78.9%	57.9%	73.7%
Housing and homelessness	100%	100%	100%
Mental health	95.0%	73.7%	94.4%
Overweight and obesity	82.4%	47.1%	50.0%
Preventive practices	85.5%	14.3%	50.0%
Sexually transmitted infections	94.1%	57.1%	71.4%
Substance use and misuse	95.0%	94.4%	84.2%
Unintentional injuries	50.0%	11.1%	55.6%
Violence and injury	79.0%	83.3%	94.4%

The stakeholders were also asked to rank order (possible score of 4) the health needs according to highest level of importance in the community. The total score for each significant health need was divided by the total number of responses for which data were provided, resulting in an overall average for each health need. Among the interviewees, housing and homelessness, mental health, access to health care,

economic insecurity and substance use and misuse were ranked as the top five priority needs in the service area. Calculations from community stakeholders resulted in the following prioritization of the significant health needs.

Significant Health Need	Rank Order Score (Total Possible Score of 4.0)
Housing and homelessness	3.95
Mental health	3.84
Access to health care	3.80
Economic insecurity	3.79
Substance use and misuse	3.74
Chronic diseases (asthma, cancer, diabetes, heart disease, kidney disease, liver disease, lung disease, stroke, Valley Fever)	3.60
Environmental pollution	3.53
Food insecurity	3.50
Sexually transmitted infections	3.42
Violence and injury	3.42
Preventive practices	3.32
Dental care/oral health	3.26
Birth indicators	3.15
Overweight and obesity	3.15
Alzheimer’s disease	3.11
Unintentional injuries	3.00

Resources to Address Significant Health Needs

Through surveys, stakeholders identified community resources potentially available to address the significant health needs. The identified community resources are presented in Attachment 4.

Review of Progress

In 2016, DRMC conducted the previous Community Health Needs Assessment. Significant health needs were identified from issues supported by primary and secondary data sources gathered for the CHNA. The hospital’s Implementation Strategy associated with the 2016 CHNA addressed access to health care, cardiovascular disease, diabetes and sexually transmitted infections (STI) through a commitment of community benefit programs and charitable resources. The impact of the actions that DRMC used to address these significant health needs can be found in Attachment 5.

Community Demographics

Population

The population of the Delano Regional Medical Center (DRMC) service area is 131,723.

Population of the Service Area

	Total Population	Total Land Area (Square Miles)	Population Density (Per Square Mile)
DRMC Service Area	131,723	744.93	176.83
Kern County	871,337	8,131.93	107.15
Tulare County	455,769	4,824.35	94.47
California	38,654,206	155,792.65	248.11

Source: U.S. Census Bureau, American Community Survey, 2012-2016, DP05. <http://factfinder.census.gov>.

Source geography: Tract. Accessed from CARES Engagement Network. <http://www.engagementnetwork.org/assessment>

From 2011 to 2016, the population in the service area increased by 4.0%.

Total Population and Change in Population, 2011-2016

	DRMC Service Area	Kern County	Tulare County
Total population	131,723	871,337	455,769
Change in population, 2011-2016	4.0%	4.8%	4.5%

Source: U.S. Census Bureau, American Community Survey, 2007-2011 & 2012-2016, DP05. <http://factfinder.census.gov>

Of the area population, 55.6% are male and 44.4% are female.

Population by Gender

	DRMC Service Area	Kern County	Tulare County	California
Male	55.6%	51.3%	50.0%	49.7%
Female	44.4%	48.7%	50.0%	50.3%

Source: U.S. Census Bureau, American Community Survey, 2012-2016, DP05. <http://factfinder.census.gov>

Children and youth, ages 0-17, make up 31.1% of the population, 62.4% are adults, ages 18-64, and 6.5% of the population are seniors, 65 and over. The service area has a higher percentage of young adults, ages 18-44, and a lower percentage of older adults, ages 45 and over, than the counties and state.

Population by Age

	DRMC Service Area	Kern County	Tulare County	California

Social Determinants of Health

Social and Economic Factors Ranking

The County Health Rankings examines social and economic indicators as a contributor to the health of a county's residents. California's 57 evaluated counties (Alpine excluded) are ranked according to social and economic factors with 1 being the county with the best ranking to 57 for the county with the poorest ranking. This ranking examines high school graduation rates, unemployment, children in poverty, social support, and other factors. Kern County is ranked as 53rd and Tulare County as 54th, in the bottom 10% of all California counties according to social and economic factors.

Social and Economic Factors Ranking

	County Ranking (out of 57)
Kern County	53
Tulare County	54

Source: County Health Rankings, 2018. www.countyhealthrankings.org

The 2018 SocioNeeds Index is a measure of socioeconomic need that is correlated with poor health outcomes. All ZIP Codes, counties, and county equivalents in the United States are given an Index Value from 0 (low need) to 100 (high need). To find the areas of highest need, the selected locations are ranked from 1 (low need) to 5 (high need) based on their Index Value.

The Kern County service area communities have a ranking of 5, the highest Index Value (highest socioeconomic need).

SocioNeeds Index Value and Ranking

	ZIP Code	Index Value (0-100)	Ranking (1-5)
Delano	93215	98.9	5
McFarland	93250	99.8	5
Shafter	93263	97.6	5
Wasco	93280	99.2	5

 No data available for Earlimart or Richgrove.

Poverty

The Census Bureau annually updates official poverty population statistics. For 2016 (the most recent year the American Community Survey poverty data were available), the federal poverty level (FPL) was an annual income of \$11,880 for one person and \$24,300 for a family of four.

Among residents in the service area, 32.1% are at or below 100% of the federal poverty level (FPL) and 65.9% are low-income (200% of FPL or below). These rates are higher

than county and state rates.

Ratio of Income to Poverty Level

	ZIP Code	Below 100% Poverty	Below 200% Poverty

Care should be taken when interpreting rates for a ZIP Code with a small population.

Vulnerable Populations

The vulnerable populations map shows the hospital service area and surrounding areas, highlighting the percentage of each subarea with more than 20% of the population living in poverty and more than 25% of the population with low education levels, defined as less than a high school education. Areas that exceed the vulnerable

threshold for low education alone are displayed in lavender. Areas that exceed the threshold for poverty alone are in tan. Areas with high rates of both poverty and low education are shown in brown. Higher rates of vulnerable populations are found in much of Kern County.

Vulnerable Populations in the DRMC Service Area

Community Input – Economic Insecurity

Stakeholder interviews identified the following issues, challenges and barriers related to economic insecurity. Following are their comments, quotes and opinions edited for clarity:

- This is a global issue that comes down to how much workers earn.

- Unfortunately, in our region, children of color, especially boys and men of color, are more likely to enter the criminal justice system and be incarcerated than go to college. We only have two public institutions of higher education and surrounding us are a number of prisons.
- The cost of housing has gone up, wages are not going up and there is a lack of education.
- We are a thriving area with growth and opportunity. Many people want to work but they do not have a place to call home, to shower, change and be fed. Even if you give them a home, they need transportation, food and clothes to break the cycle. Not everything is in place to help those who want to go back to work.
- The employment rate is very low and the jobs we do have are not always adequate to support folks and their families, so that is a challenge.
- We are an agriculture and oil-based community, and both have suffered economically. We have many people who lost jobs and their health insurance coverage. We have a large undocumented population because of our agriculture and they will often not seek medical attention.
- There is quite a bit of poverty in this town. We have very poor literacy and high dropout rates.
- Available jobs for individuals who have had a struggling past, like substance use and sobriety, coming out of incarceration, and leaving the gang lifestyle, their opportunities are minimal. These force them back to negative lifestyles and creates insecurity for them and their families.
- We live in an agriculture and industrial area. There are a lot of oil fields and we see when agriculture is in season, they are working and doing well. Then when there are slumps in the economy, it impacts everyone.
- We need a more diverse economy and we need to attract new businesses. We need good paying jobs.
- If you have a family of four and two people are working for a minimum wage, they are living in poverty.
- We face quite a number of people on the brink of homelessness because they are one or two paychecks away from losing their homes.
- The economy is a significant issue, particularly for immigrant populations and seasonal populations in Kern County. The challenge is trying to create a culture where those who are economically insecure feel safe accessing resources. Unfortunately, over the past few years, we've seen those populations get more hesitant to engage, simply out of fear. In general, it has always been a challenge to engage them and now, it is even harder. They are less willing to engage in services.
- Economic insecurity causes stress on the kids, which can impact their development, learning, health and growth.

- If you want a healthy community you need to identify the underserved populations. African Americans are bringing up the rear in every area: education, jobs, and housing.
- Thousands of people are on waiting lists to get Section 8 vouchers.
- Some families will keep their older kids at home to watch their younger siblings so the parents can go to work. Sometimes families do not have gas or water or electricity so they may not come to school. They may be living in a garage and not have access to cooking facilities.
- Everything is harder for people who are economically insecure. It is difficult to be motivated to make healthy changes, to get to their appointments, to feel confident in asking questions if they do get to a clinic or the ED. Economic insecurity breeds all sorts of insecurity.

CalFresh Eligibility and Participation

CalFresh is California’s food stamp program. According to the California Department of Social Services, 215,670 individuals in Kern County and 122, 467 in Tulare County were eligible to receive food stamps (CalFresh). However, only 164,240 (76.2%) in Kern County received food stamps. 94.4% of eligible residents in Tulare County received food stamps.

CalFresh Eligibility and Participation

	Number Eligible	Participation Rate
Kern County	215,670	76.2%
Tulare County	122,467	94.4%
California	6,034,578	71.8%

Source: California Department of Social Services’ CalFresh Data Dashboard, 2016. <http://www.cdss.ca.gov/inforesources/Data-Portal/Research-and-Data/CalFresh-Data-Dashboard>

Food Insecurity

The U.S. Department of Agriculture (USDA) defines food insecurity as limited or uncertain availability of nutritionally adequate foods or uncertain ability to acquire these foods in socially-acceptable ways. Among the population in Kern County, 13.6% experienced food insecurity during the past year. 13% of Tulare County residents experienced food insecurity. Among children in Kern County, 25% lived in households that experienced food insecurity. 26.7% of Tulare County children lived in households that experienced food insecurity at some point in the year. The rate of food insecurity was higher in Kern County and Tulare County than in the state.

Food Insecurity

	Kern County	Tulare County	California

Total population experienced food insecurity during the year	13.6%	13.0%	11.7%
Children experienced food insecurity during the year	25.0%	26.7%	19.0%

Source: Feeding America, 2016, accessed at Healthy Kern County, www.healthykern.org

Community Input – Food Insecurity

Stakeholder interviews identified the following issues, challenges and barriers related to food insecurity. Following are their comments, quotes and opinions edited for clarity:

- A lot of homebound seniors are unable to feed themselves. They do not have the support in place to get the proper nutrition.
- Even though Bakersfield is very benevolent there are still people who go hungry.
- Food banks see more and more children every day. At our homeless shelters, more and more children show up there as well. I do turkey deliveries for Thanksgiving and so many people have no stove or refrigerator. They have no heat or electricity or a place to cook their food.
- There are kids who participate and rely on the summer food program to get their meals.
- There is a lack of accessibility and availability of fresh fruits. Applying for CalFresh is a lengthy and tedious process. And even though we have a lot of agriculture here, we still lack access to fresh fruits and vegetables in our community. There are a lot of farm workers in Kern County who don't earn minimum wage. This is a barrier to having healthy food.
- There is a vast network that distributes food to rural county food banks or Feeding America. We have high rates of food insecurity, a high population of low-income and seasonal workers, who only work for a period of time. With the current labor shortage right now, they can work all year. But a big hurdle is childcare. If you have a young family and you send them to day care, it costs so much. With a couple of kids, they can't afford it, so the wife will stay at home and rely on the husband's income.
- We have a very large county, so a lot of the remote areas have less support systems and resources.
- We have a lot of food banks and pantries and a very generous community, but that doesn't mean people are food secure.
- As service providers, we think no one should go hungry, but a lot of our population doesn't know where to access food, especially healthy food. People access the least expensive, and often, the least nutritious foods versus more nutritious foods that are more costly.
- Bakersfield was named the hungriest city in America. We are such large producers of agriculture, but we are not receiving it. Our agency distributes 1.2 million pounds of food a month. These food services are intended for an emergency basis and they are being used all the time, so it is really telling what our population is lacking.

- The Department of Public Health’s waste not hunger food program is underway with four different schools. They go to the schools and gather unopened food items and redistribute them.
- There is not a lot of access to fresh food within walking distance in rural communities. We do, however, have a lot of fast food restaurants. Right now, with public charge, people are scared to get food stamps because it may impact their status in the US.
- I think one of the issues is there are so many different organizations providing food. But I don’t know if we are doing a great job of collaborating.
- A lot of households go without. They are isolated from stores due to the location where they live.

Households

In the service area, there are 28,796 households and 30,500 housing units. Over the last five years, the population grew by 4% and households grew by 5%. Home ownership increased over the same period. There were 1.5% more units occupied by owners, while renter-occupied units increased by 9.4%. The 4.2% growth of housing units in the service area was not enough to keep up with service area demand, resulting in an 7.6% decrease in vacancies from 2011 to 2016.

Households and Housing Units, and Percent Change, 2011-2016

	DRMC Service Area			Kern County			Tulare County		
	2011	2016	Percent Change	2011	2016	Percent Change	2011	2016	Percent Change

In the service area, 55.8% of households are four or more person households.

Household Size

	DRMC Service Area	Kern County	Tulare County	California
1 person households	9.8%	20.1%	17.5%	24.0%
2 person households	19.4%	27.7%	25.7%	30.1%
3 person households	15.1%	16.3%	16.7%	16.6%
4+ person households	55.8%	35.9%	40.1%	29.3%

Source: U.S. Census Bureau, American Community Survey, 2012-2016, S2501. <http://factfinder.census.gov>

45.4% of service area families spend 30% or more of their income on housing. This includes those living both in owner-occupied housing units with a mortgage and those

without a mortgage (where costs are costs of ownership), as well as those who rent. This is a higher rate than the households in Kern County, Tulare County and the state.

Earlimart (56.8%) and McFarland (50.7%) have the highest percent of families that spend 30% or more of their income on housing.

Families Who Spend 30% or More of Their Income on Housing

	ZIP Code	Percent
Delano	93215	45.7%
Earlimart	93219	56.8%

Homelessness

The Kern County Homeless Collaborative conducts an annual 'point-in-time' count of homelessness in Kern County. More than half (58.2%) of the homeless in 2018 were sheltered. Despite a downward trend in homelessness in recent years, there was a spike of 9% in homelessness from 2017 to 2018, and a 46% increase in the number of unsheltered homeless.

Among children, 3.7% of public school enrollees in Kern County were recorded as being homeless at some point during the 2015-2016 school year (Source: kidsdata.org, October 2018).

Homeless Annual Count, Kern County, 2017 and 2018

Year of Count	Total Homeless	Sheltered	Unsheltered
2017	810	66.8%	33.2%
2018	885	58.2%	41.8%

Source: Kern County Homeless Collaborative, 2018. <http://www.kernhomeless.org/> 2017 report at <http://endkernhomeless.org/filelibrary/2017%20PIT%20Count%20Report.pdf> 2018 report as reported at: https://www.bakersfield.com/news/county-s-homeless-population-spikes-in-recent-count/article_963fea6e-53fc-11e8-8e86-0721abba8fb9.html

Kings/Tulare Homeless Alliance (Alliance) conducts a Point in Time (PIT) count of the number of people experiencing homelessness within Kings and Tulare Counties. Tulare County experienced a 6% increase in homelessness from 2016 to 2017 (666 in 2017 vs. 631 in 2016). Tulare County has the largest percentage of their homeless population

living in unsheltered situations (84%). (Source: Kings and Tulare Counties 2017 Point In Time Count, https://ccrp.humboldt.edu/sites/default/files/pit_2017_tulare_king_county.pdf)

Community Input – Housing and Homelessness

Stakeholder interviews identified the following issues, challenges and barriers related to housing and homelessness. Following are their comments, quotes and opinions edited for clarity:

- We have limited shelters and there are very few options for affordable housing. There are barriers to accessing government funded programs to help find affordable housing for those who were formally incarcerated.
- People are homeless from mental health issues, substance use, and some have been rejected by society and their families. The homeless are often marginalized and put in a corner. And the addicted too. Addiction does not discriminate based on socioeconomic status.
- When prisoners leave the prison system they sometimes become homeless. In the last few years, we haven't been able to help with the mass number of early outs from prison.
- We don't have enough homeless housing resources in Kern County. The homeless sit in our Emergency Department (ED) until we convince them to go somewhere.
- We are not addressing the biggest barriers in our community, the causes of homeless. There is no mental health hospital and there are very few mental group homes. We get the homeless off the street, but we are not examining how they became homeless.
- We do have a men's facility and adequate beds there, but you have to be completely independent and have the ability to transfer independently, you can't have a wound, you can't test dirty at the gate, or you can't come into the facilities. For females and families, we have one shelter with limited beds so it is hard to find shelter for independent females, let alone families.
- Female homelessness seems to be increasing. It used to be rarer, now we see single females on the street and in the ED with complications. There are no resources to ensure a safe, secure discharge. If a person needs antibiotics or wound care, no shelter will accept patients with those types of needs.
- In Delano, you have a community that is thriving off renters. Those who own a house build a small Accessory Dwelling Unit (ADU) and they rent it out to farm workers. Every house has a tent in the backyard. Homelessness is a crisis here, rents are ridiculous. Renters know there is a shortage, so prices are increasing. Farmers are living several families together to afford the rent. One of the biggest complaints with these small towns is they haven't built their infrastructures. The quality of life declines as more individuals are living in a house than ever before.

- When foster kids emancipate, 3 in 5 become homeless within a 2-3 year period of time. Often, foster kids become homeless or go to the prison system. There are not a lot of resources for these kids.
- Respite care is a huge need. There is nowhere to go for those who need additional care that is not a hospital setting.
- There are homeless who will not receive services because they have pets. And Kern Shelter does not allow pets on the premises. Also, a lot of shelters require you to be sober and not under the influence, so if they have any substance in their system, it disqualifies them. If there is a homeless family, we have no shelter for them. The family has to be split up.
- Single females have almost no options. The problematic issue usually comes up with trying to find shelter for females. Shelters have very strict rules and if you have an infraction, you can be kicked out. Our shelters are open all year. But you have to be there between 5:30 pm and 7 pm, after that the doors are shut.
- When you sit down and talk to the homeless, you find out they have been residents for decades and they are suffering from substance use, mental health problems, and they had some type of child abuse history.
- We have not been developing low-income housing so there are fewer places to move people into. If we want the people to go somewhere, there has to be somewhere to go. We passed Measure N, a local sales tax that will go toward homeless services and policing.
- At the hospital, we have patients who are medically ready for discharge, but they can't be safely discharged to the streets. We are working on communication with other hospitals to come up with a respite care program to delay discharge to temporary shelters to help administer medicine.
- We have a lot of homeless because our economy is very dependent on oil and agriculture. When there is a drought, people do not work. When oil prices are down, service companies and those people who work in oil, get laid off.

Educational Attainment

Among area adults, ages 25 and older, 48.2% lack a high school diploma. 42.3% of adults are high school graduates and 9.5% of area adults are college graduates.

Educational Attainment of Adults, 25 Years and Older

	DRMC Service Area	Kern County	Tulare County	California
Less than 9 th grade	31.6%	14.2%	20.5%	9.9%
Some high school, no diploma	16.6%	12.2%	11.4%	8.0%
High school graduate	27.3%	27.2%	25.4%	20.6%

Reading to Children

Adults with children in their care, ages 0 to 5, were asked if children were read to daily by family members in a typical week. 52.3% of adults interviewed in Kern County and 52.1% of Tulare County adults responded yes to this question, which was lower than the California rate of 63.5%.

Children Who Were Read to Daily by a Parent or Family Member

	Kern County	Tulare County	California
Children read to daily	52.3%	52.1%	63.5%

Source: California Health Interview Survey, 2015-2016. <http://ask.chis.ucla.edu>

Parks, Playgrounds and Open Spaces

91% of Kern County children and 74% of Tulare County children, 1-17 years of age, were reported to live within walking distance to a park, playground or open space. 80.4% of Kern County youth and 55.4% of Tulare County youth had visited a park, playground or open space within the past month.

Access to and Utilization of Parks, Playgrounds and Open Space

	Kern County	Tulare County	California
Walking distance to park, playground or open space	91.0%	74.0%	88.8%
Visited park, playground or open space in past month, ages 1 to 17	80.4%	55.4%	85.9%

Source: California Health Interview Survey, 2013-2016; <http://ask.chis.ucla.edu/>

Crime and Violence

Violent crimes include homicide, rape, robbery and assault. Property crimes include burglary, larceny and motor vehicle theft. Violent crime rates were lower than county rates in the service area cities for which data was available. Violent crime rates increased from 2014 to 2017 in Delano and McFarland. The property crime rates in Delano and Shafter were higher than the Tulare County rate but lower than in Kern County. The property crime rate increased from 2014 to 2017 in Shafter, while decreasing in Delano and McFarland.

Violent Crimes Rates and Property Crime Rates, per 100,000 Persons, 2014 and 2017

	Property Crimes				Violent Crimes			
	Number		Rate		Number		Rate	
	2014	2017	2014	2017*	2014	2017	2014	2017*
Delano P.D.	1,486	1,314	2,845.4	2,516.1	215	248	411.7	474.9
McFarland	230	179	1,863.0	1,449.9	65	67	526.5	542.7

Community Input – Violence and Community Safety

Stakeholder interviews identified the following issues, challenges and barriers related to violence and community safety. Following are their comments, quotes and opinions edited for clarity:

- Our murder rate is setting a record every year. There is a lot of gang activity and random shootings on the freeways. There is talk about human trafficking, drug trafficking, and what comes up most is gang activity.

- With early release from prisons, people are being discharged into the community without anywhere to go. A lot of them can't pass a background check and they lose hope and return to their old lifestyles and behaviors. We need more opportunities to get them employed.
- School bullying is still an issue for young LGBTQ+ people. Not only from fellow students, but teachers who will not let a trans child dress in a way that reflects his/her authentic self and teachers who are not taking an LGBTQ+ child's concerns about bullying seriously.
- We get a lot of families or patients who will lash out at staff with verbal and physical abuse. Some of this is due to behavioral health patients with no medications.
- We've seen an increase in criminal activity and we know the police and sheriff are stretched thin and understaffed. There is a demand to expand funding for faster response times and to help create safer communities and public spaces.
- We see a lot more violence in our hospital with patients and against our staff, at both campuses.
- There is a lack of community trust for law enforcement. The sheriff is very anti-immigrant and very vocal about it, and that adds to a lack of trust and decreased collaboration with law enforcement.
- There is a lack of support for the sheriff and police department. They do not have the budget and support we need in troubled areas. We also lack children activity programs in poor neighborhoods, our parks are not safe anymore for kids to go and play.
- Rural areas need more support from law enforcement. Response times need to be shortened. We have prisons here and they have family members from LA who move here to be closer to their family members.
- One of the challenges I see is people are much more likely to be victims of violent crimes because of how they live, where they live and what they are exposed to.
- Domestic violence always affects the community negatively; there is no good about it. It is a horrible thing for the person suffering the assault or the violence. Children of families suffer quite a bit as well.
- We are a violent county; some people are desensitized to it. There is a lot of crime and gang activity in Bakersfield. When you consider poverty, substance use and mental illness, it ends up being an issue.
- There have been several reported homicides these last couple of days in Kern County. In addition, we have gang violence. We also have issues with police violence and a lot of community members who don't trust the police.
- In rural areas, there is not a lot of lighting, so when residents go out, it can be dangerous. Our communities have a general fear of police. People don't want to call the police for fear of being turned over to ICE or being shot at because they are Latino and Black.

- Violence is something that, unfortunately, those who live in our lower economic areas of the community struggle with a lot and it is exasperated by the homeless population and they don't feel safe.
- We have a lot of homicides. Almost all of it can be traced back to drugs and violence and gangs. Gang violence has decreased. We have a new chief of police who is very aggressive with prevention programs and policing.
- Child abuse rates have been declining.
- We have students who have family members who have been shot or stabbed. It impacts our students.

Air Quality

Days with Ozone Levels above Regulatory Standard

In 2016, Kern County had 78 days with ground-level ozone concentrations above the U.S. standard of 0.070 parts per million.

Days with Ozone Levels above Regulatory Standard, 2016

	Kern County	California
Days with ozone levels about standard	78	22

Source: California Environmental Protection Agency, Air Resources Board, Air Quality Data Statistics, Aug. 2017 from <http://www.kidsdata.org>

Annual Average Particulate Matter Concentration

Fine particulate matter (PM 2.5) is an air pollutant commonly found in diesel exhaust. PM 2.5 refers to particles with a diameter of less than 2.5 microns, or about 1/10,000 of an inch. The national annual PM 2.5 standard is 12 micrograms per cubic meter. Concentrations at or above this standard are considered potentially harmful to health, especially for sensitive groups such as young children and those with asthma. The annual average PM 2.5 concentrations in Kern County were measured at 15.9 micrograms per cubic meter.

Annual Average Particulate Matter Concentration, Micrograms per Cubic Meter, 2016

	Kern County	California
Annual average PM 2.5 concentration	15.9	9.0

Source: California Environmental Protection Agency, Air Resources Board, Air Quality Data Statistics, U.S. EPA Particulate Matter Trends, July 2017 from <http://www.kidsdata.org>

Community Input – Environmental Pollution

Stakeholder interviews identified the following issues, challenges and barriers related to environmental pollution. Following are their comments, quotes and opinions edited for clarity:

- We have some of the worst air quality in the country. We are geographically situated in a way where dirty air gets blocked in and we have major interstates used by trucks and cars to travel through the area every day and spew fumes.
- When the fires come, we have terrible air in the Bakersfield area.
- We don't have great water. We have a lot of pollution due to the pesticides being used in the fields, and there are a lot of oil rigs. There are chemicals being used that are known to cause cancer. Fields are close to schools and we have children who are being exposed to chemicals known to cause cancer and respiratory problems.
- Where we live, there are constant letters from the school and water department stating it is not safe to drink tap water. Some communities it is said not to be safe to even shower or cook with the water or to use it to wash your fruits and vegetables. It may be from fracking because there are a lot of oil rigs.
- The air in the valley is poor. We have a high incidence of COPD and Valley Fever.
- We have concerns about the impact of pollution on the community. We have to balance the local economy while taking the environment into account.
- Most low-income populations live along the freeway, which is the worst area to live when it comes to environmental pollution.
- People don't want to come here because of the horrible pollution. It is impacting our workforce development efforts.
- Agriculture and oil contribute to poor air quality and pollutants that other communities might not be exposed to. As a result, we have high rates of asthma and heart disease.
- Kern County has a lot of truck traffic. We are the main thoroughfare north to south and west into the central valley. This adds to our pollution.

Health Care Access

Health Insurance Coverage

Health insurance coverage is a key component to accessing health care. The Healthy People 2020 objective is for 100% insurance coverage for all population groups. The service area has 81.8% insurance coverage across all ages, which is lower than Kern County (86.7%), Tulare County (85.1%) and state (87.4%) rates. Earlimart has the lowest insurance coverage (77.9%), followed by Richgrove (78.5%). The highest rate of insurance coverage is 84.2% in Shafter.

Health care coverage is higher among children, 0 to 17, with 93.2% of children in the service area insured. McFarland has the lowest rate of coverage among children (91.4%).

Health Insurance Coverage

	ZIP Code	All Ages	0 to 17	18 to 64
Delano	93215	82.3%	94.2%	73.6%
Earlimart	93219	77.9%	92.5%	66.2%
McFarland	93250	81.3%	91.4%	72.8%
Richgrove	93261	78.5%	96.2%	65.9%

In Kern County, 55.4% of residents accessed care at a doctor's office, HMO or Kaiser, and 28.2% accessed care at a clinic or community hospital. In Tulare County, 37.9% of residents accessed care at a doctor's office, HMO or Kaiser, and 45.8% accessed care at a clinic or community hospital. 13% of the population in Kern County and 15.7% in Tulare County had no usual source of care.

Sources of Care

	Kern County	Tulare County	California
Dr. Office/HMO/Kaiser Permanente	55.4%	37.9%	59.8%
Community clinic/government clinic/ community hospital	28.2%	45.8%	23.8%
ER/Urgent care	2.2%*	0.4%*	1.5%
Other place/no one place	1.1%*	0.2%*	0.9%
No usual source of care	13.0%	15.7%	14.0%

Source: California Health Interview Survey, 2012-2016. <http://ask.chis.ucla.edu/> *Statistically unstable due to sample size

Accessing health care can be affected by the number of providers in a community. Kern County ranked 52 out of 57 ranked California counties (Alpine County excluded) for clinical care, and Tulare County ranked 55, which includes ratios of population-to-care

providers and preventive screening practices, among other factors. The ratio of county population to health care providers indicated fewer primary care physicians, dentists, and mental health providers for its population when compared to California.

Delano, Earlimart, McFarland, Shafter, and Wasco are part of Medical Service Study Areas (MSSAs) that have been federally-designated as High Needs Geographic Health Professional Shortage Areas (HPSAs) for primary care, or as HPSAs for primary care for low-income populations, and also as High Needs Geographic HPSAs for mental health.

Ratio of Population to Health Care Providers

	Kern County	Tulare County	California
Primary Care Physicians	2,040:1	2,310:1	1,280:1
Dentists	2,120:1	2,000:1	1,210:1
Mental health providers	610:1	420:1	320:1

Source: County Health Rankings, 2018. <http://www.countyhealthrankings.org/app/california/2018/measure/factors/62/data>

An examination of Emergency Room (ER) use can lead to improvements in providing community-based prevention and primary care. 22.2% of Kern County residents visited an ER over the period of a year. In Kern County, seniors visited the ER at the highest rates (31%), followed by children (29.1%). 16.7% of Tulare County residents visited an ER over the period of a year. In Tulare County, seniors visited the ER at the highest rates (24.6%).

Use of Emergency Room

	Kern County	Tulare County	California
Visited ER in last 12 months	22.2%	16.7%	21.6%
0-17 years old	29.1%	13.9%	19.4%
18-64 years old	18.8%	17.2%	22.2%
65 and older	31.0%	24.6%	23.7%
<100% of poverty level	35.7%	19.7%	26.5%
<200% of poverty level	28.6%	18.3%	25.0%

Source: California Health Interview Survey, 2015-2016. <http://ask.chis.ucla.edu>

Difficulty Accessing Care

5.7% of Kern County adults had difficulty finding a primary-care doctor and 11.3% had difficulty obtaining specialty care. 7.3% of Tulane County adults had difficulty finding a primary-care doctor and 13.4% had difficulty obtaining specialty care.

Difficulty Accessing Care in the Past Year, Adults

	Kern County	Tulare County	California
Reported difficulty finding primary care	5.7%	7.3%	5.8%
Reported difficulty finding specialist care	11.3%	13.4%	12.9%
Primary care doctor not accepting their insurance	6.3%	6.7%*	5.3%
Specialist not accepting their insurance	8.4%	15.8%*	11.0%

Access to Primary Care Community Health Centers

Community Health Centers provide primary care (including medical, dental and mental health services) for uninsured and medically-underserved populations. Using ZCTA (ZIP Code Tabulation Area) data for the DRMC service area and information from the Uniform Data System (UDS)¹, 65.9% of the population in the service area is categorized as low-income ($\leq 200\%$ of Federal Poverty Level) and 32.1% of the population are living in poverty.

There are five Section 330 funded grantees (Federally Qualified Health Centers – FQHCs and FQHC Look-Alikes) serving the service area, including: Altura Centers for Health, Clinica Sierra Vista, Family Healthcare Network, Omni Family Health, and United Health Centers of San Joaquin Valley, Inc.

Even with Community Health Centers serving the area, there is a large number of low-income residents who are not served by one of these clinic providers. The FQHCs and Look-Alikes serve a total of 46,747 patients in the service area, which equates to 61.3% coverage among low-income patients and 35.5% coverage among the total population. From 2015-2017, the clinic providers added 4,008 patients for a 9.4% increase in patients served by Community Health Centers. However, there remain 29,500 low-income residents, approximately 38.7% of the population at or below 200% FPL that are not served by a Community Health Center.

Low-Income Patients Served and Not Served by FQHCs and Look-Alikes

Low-Income Population	Patients Served by Section 330 Grantees In Service Area	Coverage Among Low-Income Patients	Coverage of Total Population	Low-Income Not Served	
				Number	Percent
76,247	46,747	61.3%	35.5%	29,500	38.7%

Source: UDS Mapper, 2017. <http://www.udsmapper.org>

¹ The UDS is an annual reporting requirement for grantees of HRSA primary care programs:

- Community Health Center, Section 330 (e)
- Migrant Health Center, Section 330 (g)
- Health Care for the Homeless, Section 330 (h)
- Public Housing Primary Care, Section 330 (i)

Delayed or Forgone Care

8.4% of Kern County residents and 11.1% of Tulare County residents delayed or did not get medical care and delayed or did not get prescriptions when needed. 4.6% of Kern County residents and 5.9% of Tulare County residents ultimately went without needed medical care, which is higher than the Healthy People 2020 objective of 4.2% of the population who forgo care.

Delayed Care in Past 12 Months, All Ages

	Kern County	Tulare County	California
Delayed or did not get medical care	8.4%	11.1%	10.9%
Had to forgo needed medical care	4.6%	5.9%	6.3%
Delayed or did not get medical care due to cost, lack of insurance or other insurance issue	52.0%	48.8%	47.7%
Delayed or did not get prescription meds	8.4%	10.7%	9.1%

Source: California Health Interview Survey, 2014-2016. <http://ask.chis.ucla.edu/>

Lack of Care Due to Cost, for Children

4.1% of Kern County children and 0.8% of Tulare County children, ages 0 to 17, delayed or did not get care within the prior 12 months due to cost or lack of insurance. 2.7% of Kern County children and 0.6% of Tulare County children ultimately did not receive care. 3.8% of Kern County children and 7.5% of Tulare County children had prescriptions that were delayed or unfilled in the past 12 months.

Cost as a Barrier to Accessing Health Care in the Past Year for Children, 0 to 17

	Kern County	Tulare County	California
Child's care delayed or foregone due to cost or lack of insurance	4.1%*	0.8%*	1.8%
Child forewent care	2.7%*	0.6%*	1.2%
Child's prescription medication delayed or unfilled	3.8%	7.5%*	4.9%

Community Input – Access to Health Care

Stakeholder interviews identified the following issues, challenges and barriers related to access to health care. Following are their comments, quotes and opinions edited for clarity:

- A big barrier to health care access is cultural competency. When a resident finally makes it in the door, there is no guarantee the practitioners will speak his language and be culturally sensitive. And also our LGBTQ groups have difficulty and challenges with service providers who are not LGBTQ.
- There is a lack of providers in the community. Transportation is a huge factor. It is a lot easier to take the bus to the hospital than the clinic or if you can't afford the bus pass, people call an ambulance.
- I've seen an improvement in access to care over the last couple of years with

legislative changes.

- Undocumented patients are afraid to put themselves into a situation where they can be discovered. So, they are hesitant to access resources set up for them.
- There are not enough doctor specialists who speak the language and understand the culture of area residents.
- Among residents of ethnic communities there is a lack of understanding of how to obtain medical coverage and prescription assistance. There are many resources, but people don't know how to get to them.
- A lot of people are still going to Mexico for their health care. In Mexico, they feel more comfortable, more valued, and they feel like they get what is needed. They go there on a regular basis. The only time they get care here is if they go on an emergency basis, because they can't go across the border. But if they do not have the opportunity to go to Mexico, they go to the FQHC. The ones who are most vulnerable, they have nowhere to go other than the FQHC, they are opening up lot of these clinics. For the most vulnerable and it is the only place for them to go.
- We need resources to educate people who experience homelessness on how to access the health care system. They also need transportation to get to and from appointments. There is a need for clinical staff and nurses to go out into the field and work with homeless people in clinical way and meet them where they are at. There are not enough people focused on providing health care to the homeless population.
- Transportation is a barrier to accessing care and language can be a barrier.
- There is a lack of access to care for undocumented adults.
- Accessing health care for LGBTQ individuals is a challenge. There are an estimated 3,000 Trans individuals in Kern County. We have an estimated 15,000 Bi + and 15,000 Gay and Lesbian individuals. These individuals have trouble finding an affirming doctor. Of those 3,000 Trans individuals, Trans men often still need pap smears and Trans women often need prostate exams, depending on whether they've had surgical intervention.
- The first barrier is a lack of education about how to initially enroll and use health care insurance and obtain access to primary care services.
- We have a very poor population. We are one of poorest communities in the US. Many people can't afford coverage, even catastrophic insurance rates.
- We have a lot of migrant workers. They don't come and go like they used to because crops don't rotate the same way anymore, so people stay. But there are a lot of undocumented residents and people don't get health care because they are concerned they could be deported.

Dental Care

17.2% of Kern County children and 6.4% of Tulare County children, ages 3 to 11, have never been to a dentist. Teens obtained dental care at a higher rate than children:

93.9% of Kern County teens and 95.1% of Tulare County teens had been to the dentist in the past two years.

Delay of Dental Care among Children and Teens

	Kern County	Tulare County	California
Child 3 to 11 never been to the dentist	17.2%*	6.4%*	15.9%

Community Input – Dental Care

Stakeholder interviews identified the following issues, challenges and barriers related to dental care. Following are their comments, quotes and opinions edited for clarity:

- There is not enough dental care access for the homeless population. A lot of times they may have some tooth decay and it can cause bigger and they can be hospitalized. There is a lack of services and prevention. The access is not there until it gets really, really bad or with drug use, they can lose their teeth due to meth use.
- The undocumented do not get access to dental care. If they cannot get dental care through the clinic, they have to travel or be on a waiting list for a long period of time.

- There is a lack of access due to insufficient insurance and Medi-Cal coverage for dental services. There is a lack of dentists who take Medi-Cal, and a lack of specialists. And it is unaffordable.
- Absenteeism for students is caused by illnesses associated with poor dentition. Just having a healthy mouth you have a significantly healthier student.
- I'm not sure it is priority in our community and dental care promotes and impacts a person's general health as well.
- Meth destroys teeth and Medi-Cal only provides one extraction a year, but they have a whole mouth to deal with.
- If you are on Medi-Cal, you are eligible for Denti-Cal. People we support don't know that. Finding dentists who take Denti-Cal is a struggle.
- Some populations that have had substance use issues in the past, like meth, put their dental hygiene at risk. They have a need for dental work.
- Children have more access to dental care. On Medi-Cal dental care for kids is covered, including orthodontia.
- Preventive dental care it is very expensive, so people don't go until they absolutely have to. My mom hasn't gone to the dentist in over 10 years. Why go if she doesn't need to? She is undocumented. I wasn't eligible for Medi-Cal and all we could do was go to the local clinic and they would extract the tooth – that was it. It still costs a lot of money.
- It impacts the undocumented we serve the most, because it is very expensive to get access. So, a lot of the community doesn't get dental care.
- There is a lack of education with parents as they are putting kids to bed with bottles with juice and soda. We see kids with caps on their baby teeth.
- The public health department was given money with the Prop 56 tobacco tax, which in part it is to help with dental. The biggest issue is when people finish dental or medical school, they can live in Kern or LA or the Bay area and charge more. So, it is hard to keep and get people to stay here, especially pediatric dentists. Any subspecialty has been very hard to get here in Kern County.
- We really need proactive programs because I guarantee kids are not getting dental care. People need to understand if they do not take care of their teeth, it will lead to disease.

Birth Indicators

Births

Between 2013 and 2015, there was an average of 2,193 births in the service area.

Delivery Paid by Public Insurance or Self-Pay

In the hospital service area, the rate of births paid by public insurance or self-pay was 838.9 births per 1,000 live births, which is higher than county rate (689.5 births per 1,000) and higher than the state rate (524.0 per 1,000 live births).

Delivery Paid by Public Insurance or Self-Pay, per 1,000 Live Births

	DRMC Service Area		Kern County	California
	Number	Rate	Rate	Rate
Delivery paid by public insurance or self-pay	1,840	838.9	689.5	524.0

Source: Calculated by Gary Bess Associates using California Department of Public Health Birth Profiles by ZIP Code of Residence, 2013-2015, and U.S. Census Bureau American Community Survey, 5-Year Average 2012-2016, Table B01001

Teen Birth Rate

Between 2013 and 2015, teen births occurred at an average annual rate of 12.3% of total births (122.8 per 1,000 live births). Teen births occurred at a higher rate than in the county (98.5 per 1,000 live births) and the state (55.4 per 1,000 live births).

Births to Teen Mothers (Age under 20), 2013-2015 Average, per 1,000 Live Births

	DRMC Service Area		Kern County	California
	Number	Rate	Rate	Rate
Births to teen mothers	269	122.8	98.5	55.4

Source: Calculated by Gary Bess Associates using California Department of Public Health Birth Profiles by Zip Code of Residence and U.S. Census Bureau American Community Survey, 5-Year Average 2012-2016, Table B01001.

Prenatal Care

Pregnant women in the service area entered prenatal care after the first trimester at a rate of 245.8 births per 1,000. This rate of late-entry into prenatal care translates to 24.6% of women entering prenatal care late or not at all, while 75.4% of women accessed prenatal care in the first trimester. This does not meet the Healthy People 2020 objective of 78% of women entering prenatal care in the first trimester.

Late Entry into Prenatal Care, 2013-2015 Average, per 1,000 Live Births

	DRMC Service Area		Kern County	California
	Number	Rate	Rate	Rate
Entered care after 1 st trimester	539	245.8	281.8	179.9

Source: Calculated by Gary Bess Associates using California Department of Public Health Birth Profiles by Zip Code of Residence and U.S. Census Bureau American Community Survey, 5-Year Average 2012-2016, Table B01001.

Low Birth Weight

Low birth weight is a negative birth indicator. Babies born at a low birth weight are at higher risk for disease, disability and possibly death. For this measurement, a lower rate is a better indicator. The service area rate of low birth weight babies was 6.8% (67.6 per 1,000 live births). The service area meets the Healthy People 2020 objective of 7.8% of births being low birth weight.

Low Birth Weight (Under 2,500g), 2013-2015 Average, per 1,000 Live Births

	DRMC Service Area		Kern County	California
	Number	Rate	Rate	Rate
Low birth weight births	148	67.6	70.9	67.9

Source: Calculated by Gary Bess Associates using California Department of Public Health Birth Profiles by Zip Code of Residence and U.S. Census Bureau American Community Survey, 5-Year Average 2012-2016, Table B01001.

Premature Birth

The rate of premature birth (occurring before the start of the 37th week of gestation), in the service area was 5.6% (55.5 per 1,000 live births). This rate of premature birth was lower than the Kern County rate (68.6 births per 1,000) and higher than the state rate (5.3%) of premature births.

Premature Birth before Start of 37th Week or Unknown, per 1,000 Live Births

	DRMC Service Area		Kern County	California
	Number	Rate	Rate	Rate
Premature birth	122	55.5	68.6	52.5

Source: Calculated by Gary Bess Associates using California Department of Public Health Birth Profiles by Zip Code of Residence, 2013-2015 and U.S. Census Bureau American Community Survey, 5-Year Average 2009-2013, Table B01001

Mothers Who Smoked Regularly During Pregnancy

The rate of mothers in the service area who smoked regularly during pregnancy was 0.6% (5.8 per 1,000 live births), which was lower than the county rate (3.5%) and the state rate (2.4%).

Mothers Who Smoked Regularly During Pregnancy, per 1,000 Live Births

	DRMC Service Area		Kern County	California
	Number	Rate	Rate	Rate
Mothers who smoked	13	5.8	34.8	23.7

Source: Calculated by Gary Bess Associates using California Department of Public Health Birth Profiles by Zip Code of Residence, 2013-2015 and U.S. Census Bureau American Community Survey, 5-Year Average 2009-2013, Table B01001

Infant Mortality

The infant (less than one year of age) mortality rate in Kern County was 6.8 deaths per 1,000 live births and in Tulare County the infant mortality rate was 5.8 deaths per 1,000

live births. This was higher than the state rate (4.6 deaths per 1,000 live births). The Healthy People 2020 objective is 6.0 deaths per 1,000 births.

Infant Death Rate, 2013-2015 Average, per 1,000 Live Births

	Kern County	Tulare County	California
Infant deaths	6.8	5.8	4.6

<https://www.cdph.ca.gov/Programs/CHSI/Pages/County-Health-Status-Profiles.aspx>

Breastfeeding

The Healthy People objective 2020 goal is 81.9% of infants being breastfed. Data on breastfeeding are collected by hospitals on the Newborn Screening Test Form. Breastfeeding rates at Delano Regional Medical Center indicated 91.7% of new mothers breastfeed and 58.5% breastfeed exclusively. The rate of breastfeeding initiation was higher than the county rates.

In-Hospital Breastfeeding

	Any Breastfeeding		Exclusive Breastfeeding	
	Number	Percent	Number	Percent
Delano Regional Medical Center	517	91.7%	330	58.5%
Kern County	9,977	89.8%	6,992	62.9%
Tulare County	5,161	91.0%	3,165	55.8%
California	384,637	93.9%	285,146	69.6%

Source: California Department of Public Health, Breastfeeding Hospital of Occurrence, 2017.
<https://www.cdph.ca.gov/Programs/CFH/DMCAH/Breastfeeding/Pages/In-Hospital-Breastfeeding-Initiation-Data.aspx>

There are ethnic/racial differences noted in breastfeeding rates of mothers who deliver at Delano Regional Medical Center. Among Hispanic mothers, 92.2% initiated breastfeeding and 59.6% breastfed exclusively. 88% of Asian mothers initiated breastfeeding and 60% of White mothers breastfed exclusively.

In-Hospital Breastfeeding, Delano Regional Medical Center, by Race/Ethnicity of Mother

	Any Breastfeeding		Exclusive Breastfeeding	
	Number	Percent	Number	Percent
Latino/Hispanic	458	92.2%	296	59.6%
Asian	22	88.0%	15	60.0%
White	18	85.7%	N/A	N/A
Delano Regional Medical Center	517	91.7%	330	58.5%

Community Input – Birth Indicators

Stakeholder interviews identified the following issues, challenges and barriers related to birth indicators. Following are their comments, quotes and opinions edited for clarity:

- We know birth indicators are worse for Black women. In particular, there is information that generational stress is believed to be a contributor to this. Teen pregnancy in our area also continues to be a big problem. And there is a lack of access to family planning services.
- We are doing a much better job having healthy birth weights by encouraging prenatal classes. People who come here for seasonal work may not speak English and do not have health care. As a result, they do not have access to prenatal classes and are more likely to have birth complications and low birth weight babies.
- We have returning drug moms who give birth, one after the other. One mom has come here eight times and had eight babies and she gives them up. Babies are being born addicted, and they are given to foster care. Not everyone wants to adopt a baby with a preexisting drug condition.
- We are lacking facilities and equipment to handle issues with prenatal care. We have a lot of premature babies. Kids have to go to UCLA or Valley Children's Healthcare in Madera.
- A director of maternal child noticed we didn't have widespread adoption of breastfeeding. Especially with NICU babies, they would just go to formula. So we started a breast milk bank. We found women with babies in NICU or those who have difficulty breastfeeding were amiable to accepting donor milk. There is not community access right now, as it is just for the babies in the hospitals. It would be nice to expand it for community use.
- Do women who are homeless and pregnant have access to health care and are they getting prenatal care? And where are they going once the baby is born?
- There is a lack of education for some mothers who grew up in unstable families and do not have strong role models. They try and figure it out on their own and there is a lack of trust and unwillingness to receive help and services.
- Kern County is not doing well with fetal mortality. Poor birth outcomes are a result of poverty, mental illness, homelessness, a lack of access to care, and substance use. We are having babies born addicted and with STIs.
- It can be extremely hard if you do not have resources for diapers, or your child won't latch on, and you have to use formula, or if your child has food allergies and you need specialty formula. It is very expensive and it is hard to come by, even with WIC. And getting people to participate in good prenatal care can be a challenge.
- Overall, there is low usage for WIC. The number of eligible people accessing services has gone down.
- We have high rates of low birth weight babies. Also, we have a higher rate of infant mortality than other areas of the state. This is a result of a lack of prenatal care, poverty and stressors.

Leading Causes of Death

Life Expectancy at Birth

The life expectancy for men in Kern County is 75.2 years and for females is 79.5 years. The life expectancy for men in Tulare County is 75.8 years and for females is 80.8 years. The rates of life expectancy are lower than in California.

Life Expectancy at Birth

	Years of Life Expected	
	Male	Female
Kern County	75.2	79.5
Tulare County	75.8	80.8
California	78.6	83.0

Source: Institute for Healthy Metrics and Evaluation, by Conduent Healthy Communities Institute, 2014, accessed from Healthy Kern County <http://www.healthykern.org>

Leading Causes of Death

Heart disease, cancer, and unintentional injuries are the top three causes of death in the service area. Stroke is the fourth-leading cause of death and Chronic Lower Respiratory Disease (CLRD) is the fifth-leading cause of death.

These leading causes of death are reported as age-adjusted death rates. Age adjusting eliminates the bias of age in the makeup of the populations being compared. When comparing across geographic areas, age-adjusting is typically used to control for the influence that different population age distributions might have on health event rates.

Leading Causes of Death, Age-Adjusted Rate, per 100,000 Persons

	DRMC Service Area		Kern County	California	Healthy People 2020 Objective
	Avg. Annual Deaths	Rate	Rate	Rate	Rate
Heart disease	417	201.8	213.6	161.5	No Objective
Ischemic heart disease	299	146.6	142.3	103.8	103.4
Cancer	301	135.4	165.7	158.4	161.4
Unintentional injuries	112	35.4	51.6	31.8	36.4

Heart Disease and Stroke

The age-adjusted mortality rate for ischemic heart disease in the service area was 146.6 deaths per 100,000 persons. This rate of heart disease death exceeded the Healthy People 2020 objective of 103.4 per 100,000 persons.

The age-adjusted rate of death from stroke was 34.4 deaths per 100,000 persons. This rate of stroke death was less than the Healthy People 2020 objective of 34.8 stroke deaths per 100,000 persons.

Ischemic heart Disease and Stroke Mortality Rates, Age-Adjusted, per 100,000 Persons

	DRMC Service Area		Kern County	California
	Number	Rate	Rate	Rate
Ischemic heart disease death rate	299	146.6	142.3	103.8
Stroke death rate	71	34.4	38.9	38.2

Unintentional Injury

The age-adjusted death rate from unintentional injuries in the service area was 35.4 per 100,000 persons. The death rate from unintentional injuries in the service area is lower than the Healthy People 2020 objective of 36.4 deaths for unintentional injuries per 100,000 persons.

Unintentional Injury Mortality Rate, Age-Adjusted, per 100,000 Persons

	DRMC Service Area		Kern County	California
	Number	Rate	Rate	Rate
Unintentional injury death rate	112	35.4	51.6	31.8

Source: Calculated by Gary Bess Associates using California Department of Public Health Master Death File 2013-2015 and U.S. Census Bureau American Community Survey, 5-Year Average 2012-2016, Table B01001 and using the 2010 U.S. standard million.

Community Input – Unintentional Injury

Stakeholder interviews identified the following issues, challenges and barriers related to unintentional injury. Following are their comments, quotes and opinions edited for clarity:

- People are looking at their phones and not looking around them. Driving and texting can kill somebody.
- Accidental drownings usually start when it is warm enough for the pools to open up. We also have quite a few accidental burns with spills or touching something hot.
- Motorcycle collisions are common in the community.

- In some neighborhoods there are fewer street lights, and the sidewalks and roads need improvements. The outdoor environment can lead to unintentional injuries.
- The county is not very safe for pedestrians and we do not promote safe walking and bike lanes.
- One barrier we see with kids is things happen at home and the parent will send them back to school without taking them to the doctor or the hospital. They may have a third degree burn on their arm and it is getting infected, so there is a lack of education. When they get to school, the nurse is dealing with it, and they are educating the parents.
- Safe sleep is something we have worked on to educate parents about: co-sleeping, unintentionally rolling over and suffocating the baby or having blankets around a baby and they can't breathe.
- We have a river and people will try to swim in the river but when the water is up, it is very dangerous.

Chronic Lower Respiratory Disease

Chronic Lower Respiratory Disease (CLRD) includes Chronic Obstructive Pulmonary Disease (COPD), emphysema and bronchitis. The age-adjusted death rate for respiratory disease in the service area was 33.5 per 100,000 persons, which was lower than the county (59.0 per 100,000 persons) and state (36.0 per 100,000 persons) rates.

Chronic Lower Respiratory Disease Mortality Rate, Age-Adjusted, per 100,000 Persons

	DRMC Service Area		Kern County	California
	Number	Rate	Rate	Rate
Chronic Lower Respiratory Disease death rate	67	33.5	59.0	36.0

Source: Calculated by Gary Bess Associates using California Department of Public Health Master Death File 2013-2015 and U.S. Census Bureau American Community Survey, 5-Year Average 2012-2016, Table B01001, and using the 2010 U.S. standard million.

Alzheimer's Disease

The mortality rate from Alzheimer's disease in the service area was 31.1 per 100,000 persons. This is lower than the Kern County rate (50.5) and the state rate (35.5 per 100,000 persons).

Alzheimer's Disease Mortality Rate, Age-Adjusted, per 100,000 Persons

	DRMC Service Area		Kern County	California
	Number	Rate	Rate	Rate
Alzheimer's disease death rate	59	31.1	50.5	35.5

Source: Calculated by Gary Bess Associates using California Department of Public Health Master Death File 2013-2015 and U.S. Census Bureau American Community Survey, 5-Year Average 2012-2016, Table B01001, and using the 2010 U.S. standard million.

Community Input – Alzheimer's Disease

Stakeholder interviews identified the following issues, challenges and barriers related to Alzheimer's disease. Following are their comments, quotes and opinions edited for

clarity:

- Accessing support resources is a challenge for families. Resources will be more limited as we get older and more people get diagnosed with the disease.
- Alzheimer’s disease requires 24-hour care. It is very common that families are not able to effectively care for their loved ones due to the high cost of treating or caring for them. A lot of families have to quit their jobs to stay home and care for a loved one because they do not have other options.
- Hospitals treat the patients but there is no family support.
- Persons with Alzheimer’s disease are not well supported unless they have a home support service and can afford to hire help in the home. Often, they end up in institutions.
- There is a need for respite for the caregivers in the family. There are a lot of mental health issues with the caregivers and a lot of times there is depression. The system is very difficult to navigate when a family member has Alzheimer’s.
- How do we provide dental hygiene for Alzheimer’s disease patients? Especially with them being uncooperative due to their disease?
- There is an issue when it comes to safe discharge into the community from a hospital setting. There is a lack of skilled nursing care in our county and skilled nursing doesn’t provide memory care. Memory care is generally very expensive. We see a lot of caregiver burnout as well.
- The challenge will be keeping up with the aging population and making sure we have available resources.
- There are not a lot of resources for dementia and Alzheimer’s care and I don’t hear a lot about prevention.

Diabetes

The age-adjusted death rate from diabetes in the service area was 29.9 deaths per 100,000 persons. This was lower than the county (37.4 deaths per 100,000 persons) rate and higher than the state rate (22.6 deaths per 100,000 persons).

Diabetes Mortality Rate, Age-Adjusted, per 100,000 Persons

	DRMC Service Area		Kern County	California
	Number	Rate	Rate	Rate

Liver Disease

The age-adjusted death rate from liver disease in the service area was 15 per 100,000 persons. This was lower than the county (15.9 per 100,000) rate and higher than the state (13.8 per 100,000 persons) rate of liver disease deaths. The area exceeds the Healthy People 2020 objective for liver disease deaths (8.2 per 100,000 persons).

Liver Disease Mortality Rate, Age-Adjusted, per 100,000 Persons

HIV

In Kern County, 107 new cases of HIV were diagnosed in 2016 (12.0 cases per 100,000 persons). The Kern County rate of HIV was 180.8 per 100,000 persons. In Tulare County, 33 new cases of HIV were diagnosed in 2016 (7.0 cases per 100,000 persons). The Tulare County rate of HIV was 91.6 per 100,000 persons.

Coccidioidomycosis

Coccidioidomycosis, or Valley Fever, is an illness caused by a fungus found in the soil. The fungus can become airborne and be inhaled with dust particles. It affects the lungs and can produce flu-like symptoms and pneumonia. 2017 showed the highest rate of Valley Fever since the disease became individually-reportable in 1995. Kern County has the highest rate of Valley Fever in California. Rates of Valley Fever in Kern County have risen from a low of 106.2 in 2014, to 305.7 cases per 100,000 residents in 2017. The rate of Valley Fever is 58.2 per 100,000 persons in Tulare County.

Valley Fever, Cases and Rates, per 100,000 Persons, 2013 - 2017

	2013		2014		2015		2016		2017

Community Input – Chronic Diseases

Stakeholder interviews identified the following issues, challenges and barriers related to chronic diseases. Following are their comments, quotes and opinions edited for clarity:

- Valley fever has become a great concern in our territory. I feel our local legislature has made it a priority and it is receiving the attention needed for a response to be put into place.
- We don't do a good job providing services in the community for patients we discharge with chronic diseases. We have high rates of readmissions; a lot of them are Medicare and Medicaid patients.
- We are also seeing a lot of oral cancers. This is tied to STIs and HPV. There is definitely a correlation to those having the HPV virus and developing oral cancer.
- A significant amount of lung cancer is being found at late stages. We think it's due to a lack of screening.
- A population that is underserved is the sickle cell population. They don't typically receive primary care, as no one knows how to manage this disease, and they end up in the ER, which costs millions of dollars. There is no comprehensive program for this population.
- A lot of people don't know they have chronic diseases. Once they are made aware, they rarely make needed lifestyle changes. But there could be a different approach to it, understanding the culture and integrating promotoras. We would have better success with those diagnosed with chronic diseases to make the changes that are needed.
- Because of environmental pollutants, we have high levels of asthma, Valley Fever and cancer.
- People who have trauma early in their life, we see it correlates with heart disease and diabetes and other health issues that get carried into adulthood.
- Cardiac disease and diabetes are impacted by poor life style choices.
- Diabetes is one of the biggest challenges for our population. It is hard for them to not continue some of their traditional eating habits.
- We seem to have a high rate of noncompliance with chronic disease management.
- With diabetes, people are not able to manage it, the medications are too expensive, and they may not have the right education to know what to eat.
- Valley Fever symptoms match with the flu, so people think they have the flu.
- People who live in the rural areas in Kern County are impacted by chronic diseases the most because of the exposure they have. Sometimes, there is more pollution in the area. An issue is they don't have sidewalks or state-run clean parks. Rural areas don't have access to fresh foods, which is ironic in our primarily farm worker community.
- The most obvious issue is readily available access to primary care services. Our FQHCs are doing an excellent job in trying to attract and manage those patients with

chronic diseases, but we need more primary care access. It shouldn't take 60 or 90 days to get into a primary care doctor.

- In the last couple of years, Valley Fever has gotten some good attention. People want to invest in treatment, a vaccine and education so people know they could be exposed to the spores.

Health Behaviors

Health Behaviors Ranking

County Health Rankings examines healthy behaviors and ranks counties according to health behavior data. California's 57 evaluated counties (Alpine excluded) are ranked from 1 (healthiest) to 57 (least healthy) based on a number of indicators that include: adult smoking, obesity, physical inactivity, excessive drinking, sexually transmitted infections, and others. At the bottom of California counties for health behaviors, Tulare County ranks 56 and Kern County ranks 57.

Health Behaviors Ranking

	County Ranking (out of 57)
Kern County	57
Tulare County	56

Sexually Transmitted Infections

Rates of STIs are climbing rapidly in Kern County. Except for congenital syphilis, the rates for STIs in Tulare County are lower than state rates.

The rate for chlamydia in Kern County in 2017 was 763.1 diagnosed cases per 100,000 persons. The Kern County rate of gonorrhea was 251.6 cases per 100,000 persons, The primary and secondary syphilis rate for Kern County was 27.9 diagnoses per 100,000 persons. The rate for early latent syphilis was 20.6 per 100,000 persons. The rate of congenital syphilis is also rising swiftly. In Kern County, there were 172.7 cases per 100,000 births. In Tulare County, the rate of congenital syphilis was 67.8 per 100,000 births. The Healthy People 2020 objective for congenital syphilis is 9.6 cases per 100,000 births.

STI Cases, Rate per 100,000 Persons, 2017

	Kern County		Tulare County		California
	Cases	Rate	Cases	Rate	Rate

Community Input – Sexually Transmitted Infections

Stakeholder interviews identified the following issues, challenges and barriers related to sexually transmitted infections (STIs). Following are their comments, quotes and opinions edited for clarity:

- There are 12, 13, and 14 year olds who are sexually active. We must provide preventive care and education at an early age. If there is no money or access to condoms and you are a 15-year-old, you will have unprotected sex.
- We have sex trafficking and prostitution. With prostitution, they move them around. They are here this week and then Las Vegas the next week, so it is hard to catch up with individuals to make sure they get education and treatment.

- With Latinos, there is taboo around this subject, so it is not talked about. Children are having sex, but we cannot talk to them about it.
- The biggest issue is people's fear of being tested. The process is invasive so they prefer not to get a test. They are asked many questions before they can do the blood work and they are uncomfortable with the process.
- We have seen an increase in our population with syphilis. Pregnant women are coming in to have their babies and they test positive for syphilis.
- In our community, generally, everything is very reactionary. Some aren't getting prenatal care, some do, but once they have syphilis, they have to follow through with care and take so many doses of medication, and they have to get blood tests, so sometimes, they start to get care and then they don't follow through.
- Part of the problem is our conservative culture of sexuality in our county. The more we can get access to preventive care, contraception and education, the better.
- People aren't proactive about their sexual health. Unlike when people have cold or flu symptoms and they make an appointment with a doctor, if someone just had sex, they don't get tested. But they should get tested. People don't seek attention if they don't have any symptoms. They could have a bacterium but not have symptoms.
- There may be stigma or personal bias on the part of the doctors in interacting with the clients. There may be personal embarrassment on the part of the patient. I often see people don't want to talk about sex with someone they see quite frequently. Also, if a person goes to a provider and the provider seems judgmental or imposes their own biases, it won't work.
- We're seeing more people with multiple infections, (i.e., they have chlamydia, congenital syphilis, and gonorrhea). What's troubling is these people become more at risk for HIV.
- Youth are getting misinformation and their sex education from their peers. With older adults, substance use issues are contributing to STI cases.
- Some issues are a lack education, culture, and religious beliefs of the parents. They should talk about this, but they don't talk about sex with their children.

Overweight and Obesity

In Kern County, 34.8% of adults, 21.6% of teens, and 23.4% of children are overweight. In Tulare County, 36.8% of adults, 19.7% of teens, and 14.8% of children are overweight. Kern County and Tulare County have a larger percentage of overweight children and teens than found in the state. Tulare County has a higher rate of overweight adults than found in the state.

Overweight

The physical fitness test (PFT) for students in California schools is the FitnessGram®. One of the components of the PFT is measurement of body composition (measured by

skinfold measurement, BMI, or bioelectric impedance). Children who do not meet the “Healthy Fitness Zone” criteria for body composition are categorized as needing improvement (overweight) or at health risk (obese).

In area school districts, the percentage of 5th grade students tested as body composition needing improvement and at health risk ranged from 40.7% to 55.4%, and 7th grade students ranged from 45.5% to 57.9% needing improvement and at health risk. By 9th grade, there was a slight improvement in the percentage of students needing improvement or at health risk: ranging from 43.6% to 49.6% needing improvement and at health risk.

5th, 7th and 9th Graders; Body Composition, ‘Needs Improvement’ and ‘Health Risk’

	Fifth Grade		Seventh Grade		Ninth Grade	
	Needs Improvement	Health Risk	Needs Improvement	Health Risk	Needs Improvement	Health Risk

Physical Activity

Recommendations for physical activity for adults include both aerobic exercise (at least 150 minutes per week of moderate exercise, or 75 minutes of vigorous exercise) and muscle-strengthening (at least 2 days per week). For children and teens, the guidelines

are at least an hour of aerobic exercise daily and at least two days per week of muscle-strengthening exercises.

36.3% of children in Kern County and 35.3% in Tulare County met the aerobic requirement. 9% of teens in Kern County met the guideline. 32.2% of Kern County adults and 32.1% of Tulare County adults walked for at least 150 minutes per week, compared to 38.8% of adults at the state level.

Aerobic Activity Guidelines Met

Community Input – Overweight and Obesity

Stakeholder interviews identified the following issues, challenges and barriers related to overweight and obesity. Following are their comments, quotes and opinions edited for clarity:

- We are so inundated with fast food options. In poorer communities, fast food options are the only options. There are few grocery stores with fresh produce.
- We have a lot of obesity, which drives chronic diseases like diabetes, cardiovascular disease and COPD.
- When we talk about childhood obesity, it is important to reach the parents.
- There is limited accessibility to affordable, fresh, healthy foods. There are food deserts in Kern County.
- Because there is an ample food supply, we tend to have a very large problem with obesity and diabetes.
- We need more health education. We have an aging population and they have a sedentary lifestyle. The average male gets home and drinks beer, and culturally, the woman does everything in the house. Both need physical activity. We have obese people all over the valley. Diabetes is very prevalent. We need youth programs and activities, and more things for rural adults to do after work to get some exercise.
- There is a lack of healthy food access and a lack of fresh produce.
- It is very difficult to walk in many communities. We are not a pedestrian-friendly county. Sidewalks are bad and people are constantly getting hit by cars. In our urban center we do very little to promote a pedestrian landscape. We know for four months out of the year no one will be outside because it's just too hot. We are really held hostage to our weather here in a way we don't need to be.
- There are more liquor stores than grocery stores.
- In our schools education is changing and physical activity has taken a back seat.

- We are not a city where it is conducive to exercise or outside activity. We cannot walk to work. We have one bike path, and if you are not near it, it is hard to use. The problem is exacerbated by a lack of appropriate grocery stores that have produce and fresh foods. In certain areas of town, the downtown area, the closest grocery store is 5 miles away.
- A lot of kids spend too much time in front of the TV and on their phones. Parents will send kids to school with hot Cheetos and soda, so we need to educate the parents what they should be feeding their kids. It has to start at home.

Mental Health

Satisfaction with Quality of Life

82.2% of residents in the Mountains region of Kern County were most likely to say they were 'Very' or 'Somewhat' satisfied with their quality of life compared to residents of West Kern County (70.4%), the Central Valley (74.6%), or East Kern County (54.2%).

Satisfaction with Quality of Life

	West Kern	Central Valley	Mountains	East Kern
Very or somewhat satisfied	70.4%	74.6%	82.8%	54.2%
Somewhat or very dissatisfied	29.6%	25.4%	18.2%	45.8%

Mental Health

Among adults in Kern County, 12% had experienced serious psychological distress in the past year. 10.7% of Tulare County adults had experienced serious psychological distress in the past year. 9.1% of adults in Kern County and 11.6% of Tulare County adults had taken a prescription medication for two weeks or more for an emotional or personal problem during the past year. Serious psychological distress was experienced in the past year by 4% of Kern County teens and 3.5% of Tulare County teens, which was less than the state level (9.7%).

Mental Health Indicators

	Kern County	Tulare County	California
Adults who had serious psychological distress during past year	12.0%	10.7%	8.1%
Adults taken prescription medicine at least 2 weeks for emotional/mental health issue in past year	9.1%	11.6%	11.0%
Adults: Family life impairment during the past year	16.9%	15.0%*	13.7%
Adults: Social life impairment during the past year	14.4%	14.2%*	13.8%
Adults: Household chore impairment during the past year	14.5%	11.3%*	12.7%
Adults: Work impairment during the past year	10.5%*	9.6%*	10.7%
Teens who had serious psychological distress during past year**	4.0%*	3.5%*	9.7%

Community Input – Mental Health

Stakeholder interviews identified the following issues, challenges and barriers related to mental health. Following are their comments, quotes and opinions edited for clarity:

- There is a lack of understanding on how to get access to mental health care, especially in the Latino Spanish speaking community. There may be resources out there, but they don't know about it or how to navigate the system.
- There is a major lack of comprehensive mental health services. A majority of police calls are actually mental health situations. And realistically, our police officers do not have adequate training on how to deal with people having mental health crises. Another issue is the majority of our inmates are diagnosed with mental health issues.
- There are so many cultures not willing to seek out mental health services because of the stigma. I am college educated and have insurance and yet, I have yet to find a culturally competent mental health provider who is a person of color, LGBTQ person.
- Many people abuse street drugs to help them cope and that is a recipe for disaster.
- There are not enough mental health chronic care resources in the community. We do not have a lot of psychiatrists in Kern County.
- We are getting so many young people suffering from mental illness and not being treated and they end up homeless. We have a shelter with 171 beds for women and children. We had 231 people there one night when it was cold and rainy. If you talk to yourself or if you have a pet, you can't get into another shelter so they come to ours. All of the shelters are bursting at the seams. We lack transitional housing.
- Mental health has a very fragmented support system by regions, and there is a lack

of continuity of care. Intermediate mental health care for those who are not quite ready to be home but not ready to be in a psych unit either is lacking.

- Mental health is a big need. In Delano, there is only one clinic center that provides mental health. Soon, there will be another one.
- It is not an easy system to navigate. There are long wait times so you have to make an appointment far in advance. The people we serve aren't equipped to do this. It is not realistic to follow up with treatment and sit for three hours in the waiting room and make an appointment months in advance.
- For our Medi-Cal population, once they come to the decision they want to receive mental health services, the process is so long they become discouraged, or they may relapse and then we have to start over with a new assessment.
- Our county does not allow anyone to involuntarily detain a person (5150 hold) except law enforcement and their mobile evaluation team. Even in a hospital setting, it is up to them if the patient meets the criteria, and the hospital is still held responsible for safe discharge. There have been instances when the mobile evaluation team evaluates a person as needing a 5150 hold but there is no inpatient facility willing to take them because of their co-occurring medical issues. In these cases, the hospital cares for the patient and holds them, even though we are not a psychiatric facility. We hold them until we can determine a safe plan for them and we may hold them for days or weeks.
- Resources are not available in rural communities. We have a crisis center, but it is in Bakersfield. For families who have a young person threatening to kill himself what do you do? Do you call 911? What are the resources to address it?
- We have insufficient residential facilities for people who are suffering with mental health issues. Those of us who provide services for the homeless, we are not provided funding to hire mental health professionals. It is more of a peer support network.
- We have a fairly good children's system of care. It is geographically regionalized, so accessibility is better than in the past. However, the adult system of care is fractured and overwhelmed. For those with chronic mental health issues, it seems to be a revolving door.
- We believed people who needed mental health would have a place to go that is safe and have practitioners to take care of them and now we don't have that. We need to quickly identify that mental health doesn't need to mean homeless, but we've thrown mental health into homelessness and that is where it's landed.

Substance Use and Misuse

Cigarette Smoking

The Healthy People 2020 objective for cigarette smoking among adults is 12%. In Kern County, 14.6% of adults smoke cigarettes, and 17% of Tulare County adults smoke cigarettes, which is higher than the state rate (12.1%). 75.4% of current Kern County smokers and 76.7% of Tulare County smokers say they are considering quitting in the next six months. 27.8% of Kern County residents had smoked an e-cigarette in the previous month.

Smoking, Adults

	Kern County	Tulare County	California
Current smoker	14.6%	17.0%	12.1%
Former smoker	19.8%	17.5%	21.9%
Never smoked	65.6%	65.5%	66.0%
Thinking about quitting in the next 6 months	75.4%	76.7%*	73.0%
Smoked e-cigarette in past month**	27.8%	No Data	32.6%

Source: California Health Interview Survey, 2014-2016 **2015. <http://ask.chis.ucla.edu> *Statistically unstable due to sample size.

5.8% of teens in Kern County and 5.3% of Tulare County teens are current smokers. 18.9% of teens in Kern County and 11.8% of Tulare County teens have tried an e-cigarette. Once Kern County teens had smoked an e-cigarette, 100% of teens smoked one in the past 30 days.

Smoking, Teens

	Kern County	Tulare County	California
Current cigarette smoker**	5.8%*	5.3%*	2.1%
Ever smoked an e-cigarette	18.9%*	11.8%*	9.0%
Smoked one in the past 30 days	100%*	No Data	27.3%

Source: California Health Interview Survey, 2014-2016; **2012-2016. <http://ask.chis.ucla.edu> *Statistically unstable due to sample size.

Alcohol

Binge drinking is defined as consuming a certain amount of alcohol within a set period of time. For males, this is five or more drinks per occasion and for females, it is four or more drinks per occasion. Among adults, 32.6% in Kern County and 30.6% in Tulare County had engaged in binge drinking in the past year. 12.5% of Kern County teens and 1.4% of Tulare County teens binge drank in the past month.

Adult and Teen Binge Drinking, and Teen Alcohol Experience

	Kern County	Tulare County	California
Adult binge drinking, past year	32.6%	30.5%	34.7%
Teen binge drinking, past month	12.5%*	1.4%*	3.7%
Teen ever had an alcoholic drink	21.0%*	17.3%*	24.2%

Source: California Health Interview Survey, 2015 adults, 2012-2016 pooled, for teens. <http://ask.chis.ucla.edu/> *Statistically unstable due to sample size.

Marijuana Use, Youth

Marijuana use was reported by 7.4% of 7th graders in Kern County and 11.7% of Tulare County 7th graders. Marijuana use was reported by 25.1% of 9th graders and 38.7% of 11th graders in Tulare County.

Marijuana Use, Teens

	Kern County	Tulare County	California
Ever tried marijuana, 7 th grade	7.4%	11.7%	7.2%
Ever tried marijuana, 9 th grade	N/A	25.1%	22.3%
Ever tried marijuana, 11 th grade	N/A	38.7%	36.0%
Used marijuana 0 days in past 30 days, 7 th grade	96.1%	94.2%	95.8%
Used marijuana 1 day in past 30 days, 7 th grade	1.3%	2.3%	1.5%
Used marijuana 2 days in past 30 days, 7 th grade	0.8%	1.0%	0.7%
Used marijuana 3-9 days in past 30 days, 7 th grade	0.8%	1.1%	0.7%
Used marijuana 10-19 days in past 30 days, 7 th grade	0.5%	0.7%	0.5%
Used marijuana 20-30 days in past 30 days, 7 th grade	0.3%	0.8%	0.8%
Used marijuana 0 days in past 30 days, 11 th grade	N/A	80.8%	82.0%
Used marijuana 1 day in past 30 days, 11 th grade	N/A	4.2%	4.6%
Used marijuana 2 days in past 30 days, 11 th grade	N/A	3.0%	2.9%
Used marijuana 3-9 days in past 30 days, 11 th grade	N/A	4.1%	4.2%
Used marijuana 10-19 days in past 30 days, 11 th grade	N/A	3.1%	2.4%
Used marijuana 20-30 days in past 30 days, 11 th grade	N/A	4.9%	3.9%

N/A = data suppressed due to small sample size.

Opioid Use

The rate of hospitalizations due to opioid overdose was 11.9 per 100,000 persons in Kern County and 12.5 per 100,000 persons in Tulare County. This is higher than the state rate (7.6 per 100,000 persons). Opioid overdose (excluding heroin) ER visits in Kern County were 18.9 visits per 100,000 persons, a higher rate than found in the state (10.3 per 100,000 persons) or county (10.1 in Tulare County). The rate of opioid prescriptions in Kern County was 772.1 per 1,000 persons and in Tulare County the rate of opioid prescriptions was 716.2 per 1,000 persons. These rates were higher than the state rate of opioid prescribing (508.7 per 1,000 persons).

Opioid Use

	Kern County	Tulare County	California
Hospitalization rate for opioid overdose (excludes heroin), per 100,000 persons	11.9	12.5	7.6
ER visits for opioid overdose (excludes heroin), per 100,000 persons	18.9	10.1	10.3
Opioid prescriptions, per 1,000 persons	772.1	716.2	508.7

Community Input – Substance Use and Misuse

Stakeholder interviews identified the following issues, challenges and barriers related to substance use and misuse. Following are their comments, quotes and opinions edited for clarity:

- We have moving pop-up smoke shops and a lot of children are vaping, which is becoming a concern. With our bad air quality, vaping increases respiratory issues.
- There are a lot of drugs in the county; a lot of people are addicted. We see patients with overdoses, serious skin conditions, and hand, arm and feet infections from shooting up. They need skin reconstruction, debridement, antibiotics and surgery.
- There is very easy access to drugs. We have a lot of meth labs here.
- There is an increase in vaping in junior high and elementary schools. It is ubiquitous, with easy access. I've seen a major increase in drug use and most of it is among people who were over prescribed opiates for sport injuries, and they became addicted.
- It is an overwhelming population issue. We see a lot of addiction and related complications. There are resources for the very well insured and the Salvation Army and Jason's Retreat will accept people, but the need far outweighs the resources.
- Drugs are very accessible. And we have younger kids who are consuming drugs. Weed is becoming part of the norm, especially when we have laws that legalized it. Meth is used by the addicts, but the youth are normalizing pot.
- There are not enough resources for people with Medi-Cal to obtain inpatient treatment. When you have someone who is willing to go to treatment, you have to move quickly and there aren't enough resources to do that. By the time you figure it out to help them, they are in different state of mind. People will transfer their Medi-Cal to LA to get treatment services because they do not exist in Kern County.
- We don't have inpatient substance use treatment facilities or adequate knowledge of the available resources.
- There are a lot of public safety concerns with needles being left in public parks. People walk through where needles have been left behind. This presents health issues for those who want to use the park.
- Meth contributes to chronic congestive heart failure and COPD. A huge barrier is trying to find a place to care for them. If they have a history of drug use, a skilled nursing facility won't take them

- There is a lot of spice use. Spice is synthetic cannabis, but it is illegal, so it is getting made in garages. It is some sort of chemical that makes people pass out and throw up. It is not unusual to see spice users have a seizure.
- We have a big issue with opiate addiction in Oildale. It's impacting families that are predominately White.
- We still see a lot of people smoking and vaping. We have a very high rate of meth use. We see meth use with young and old and rich and poor. And we have issues with heroin and other opioids. We had a big spice problem for a long time, but that has gotten better, and they've shut down shops selling spice.
- There has been a decline in smoking. One of the reasons people decide to quit is it is too expensive.
- For alcohol use we have very aggressive check points around the city. The younger generation does not drive under the influence as much. It is not worth the cost to get caught. Uber and Lyft have made it more affordable to get home.

Preventive Practices

Flu Vaccines

The Healthy People 2020 objective is for 70% of the population to receive a flu shot. 44.1% of Kern County adults and 44.8% of Tulare County adults received a flu shot. Among Kern County seniors, 69.7% had received a flu shot. Among Kern County children, 6 months to 17 years of age, 47.7% received the flu shot. 81.2% of Tulare County seniors and 49.4% of Tulare County children received a flu shot.

Flu Vaccine

	Kern County	Tulare County	California
Received flu vaccine, 65+ years	69.7%	81.2%	70.4%
Received flu vaccine, 18+ (includes 65+)	44.1%	44.8%	42.6%
Received flu vaccine, 6 months-17 years	47.7%	49.4%	51.3%

Source: California Health Interview Survey, 2014-2016. <http://ask.chis.ucla.edu>

Immunization of Children

Among area schools, rates of compliance with childhood immunizations upon entry into Kindergarten ranged from 96% in the McFarland Unified School District to 98.7% in the Richgrove Elementary School District. These rates exceed county and state rates.

Up-to-Date Immunization Rates of Children Entering Kindergarten, 2017-2018

	Immunization Rate
Delano Union Elementary School District	98.2%
Earlimart Elementary School District	98.6%
McFarland Unified School District	96.0%
Richgrove Elementary School District	98.7%
Richland Union Elementary School District	98.3%
Wasco Union Elementary School District	97.6%
Kern County*	89.3%
Tulare County*	95.6%
California*	92.2%

Community Input – Preventive Practices

Stakeholder interviews identified the following issues, challenges and barriers related to preventive practices. Following are their comments, quotes and opinions edited for clarity:

- Trying to get a doctor's appointment and be proactive with your health is not always an easy task. With checkups, there is no cost but if you go in for these checkups and something is abnormal, follow-up can be expensive and it is difficult to navigate through the insurance system.
- A lot of the population is very reactive and not proactive. They only act once the issue is already present.
- Veterans are not accessing preventive services. This population is being underserved.
- We do a pretty good job with screening, but only for certain cancers. What isn't happening is we aren't addressing outlying areas. There are no screenings in Taft or California City. We aren't reaching the very northern and southern parts of the county.
- There is a lack of education at young ages. We tend to address the disease and not the preventive part of the disease.
- We need more promotion and education with our youth.
- Even when we have access to health care, it is expensive to go to the doctor when you are on a limited budget. Even with insurance, you still have to pay a copay.
- Undocumented families don't have access to preventive care. We have a high presence and enforcement from ICE in Kern County so people are afraid to go out if they do not have to.
- There is a lack of primary care services, so people just forgo preventive screenings.
- People tend to not go to the doctor until they have a problem.

Attachment 1. Benchmark Comparisons

Where data were available, health and social indicators in the service area were compared to the Healthy People 2020 objectives. The **bolded items** are indicators that did not meet the Healthy People 2020 objectives; non-bolded items met or exceeded the objectives.

Service Area Data	Healthy People 2020 Objectives
High school graduation rate 85.8% Kern County; 86.1% Tulare County	High school graduation rate 87%
Child health insurance rate 93.2%	Child health insurance rate 100%
Adult health insurance rate 72.8%	Adult health insurance rate 100%
Persons unable to obtain medical care 4.6% Kern County; 5.9% Tulare County	Persons unable to obtain medical care 4.2%
Heart disease deaths 146.6 per 100,000	Heart disease deaths 103.4 per 100,000
Cancer deaths 135.4 per 100,000	Cancer deaths 161.4 per 100,000
Stroke deaths 34.4 per 100,000	Stroke deaths 34.8 per 100,000
Unintentional injury deaths 35.4 per 100,000	Unintentional injury deaths 36.4 per 100,000
Liver disease deaths 15.0 per 100,000	Liver disease deaths 8.2 per 100,000
Homicides 12.9 per 100,000	Homicides 5.5 per 100,000
Suicides 7.2 per 100,000	Suicides 10.2 per 100,000
On-time (1st Trimester) prenatal care 75.4% of women	On-time (1 st Trimester) prenatal care 78% of women
Low birth weight infants 6.8% of live births	Low birth weight infants 7.8% of live births
Infant death rate 6.8 Kern County; 5.8 Tulare County	Infant death rate 6.0 per 1,000 live births
Adult obese, age 20+ 40.7% Kern County; 34.7% Tulare County	Adult obese, age 20+ 30.5%
Teens obese 20.6% Kern County; 30.2% Tulare County	Teens obese 16.1%
Adults who are sedentary 22.9%	Adults who are sedentary 32.6%
Annual adult influenza vaccination, 18+ 44.1% Kern County; 44.8% Tulare County	Annual adult influenza vaccination, 18+ 70%
Adults engaging in binge drinking 32.6% Kern County; 30.5% Tulare County	Adults engaging in binge drinking 24.2%
Cigarette smoking by adults 14.6% Kern County; 17.0% Tulare County	Cigarette smoking by adults 12%
Mammograms 78.6% Kern County; 82.6% in Tulare County	Mammograms 81.1%, ages 50-74, screened in the past 2 years

 - Opioid addiction
- Valley Fever
- Water quality

What kinds of problems do you and your family face when you want or need to obtain health care, mental health care, dental care or other supportive services?

- Access to care (authorization for services, appointment availability, urgent care, after hours and weekends, referrals, time off work, wait times, provider availability, specialist availability)
- Cost of care
- Dental care (availability, access to care)
- Health insurance deductibles/co-pays/out-of-pocket payment
- Mental health (availability, access to care)
- Transportation

What would make it easier for you and your family to obtain care?

- Ability to obtain health insurance (lower deductibles, lower cost)
- After hour's access/more appointments
- Availability of dental care
- Availability of medications/affordability of medications
- Better communication between health care providers and insurers
- Mobile health care
- More providers who will accept Medi-Cal
- Shorter wait times/easier scheduling/streamlined referrals
- Transportation assistance

What type of support or services do you see a need for?

- 24 hour urgent care
- Addiction services
- Affordable housing
- Affordable preschool/child care
- Alzheimer's disease services
- Assisted living
- Crime prevention
- Dental care
- Diabetes education, specialists
- Drug treatment programs
- Elder care
- Eye specialists
- Exercise options/recreation space
- Food bank/food pantry
- Grocery stores/grocery delivery
- Health education

- Home health
- Homeless resources and services
- Insurance enrollment assistance
- Long-term care
- Mental health services
- More psychiatric beds
- Nutrition services
- Pediatric providers
- Screenings
- Social workers
- Specialists
- Support for persons with autism
- Teen mental health programs
- Transportation
- Veterans' assistance

What resources are lacking within the community?

Mental health services/supports	56.1%
Behavioral health/substance use services	50.1%
Affordable housing	40.2%
Health care access	34.8%
Transportation	31.7%
Recreational spaces	27.3%
Affordable food	23.7%
Health care access	23.3%
There is no lack of resources in my community	4.5%
I don't know what resources are lacking	17.8%

What are the greatest needs or challenges facing children and families in the community?

- Access to care, affordable health care
- Adequate education
- Affordable housing
- Air pollution
- Asthma management
- Bullying
- Child care (affordable and safe)
- Crime
- Dental care
- Drug use

- Family counseling
- Healthy foods
- Homelessness
- Job preparation/job opportunities
- Mental health services
- Obesity
- Parental involvement
- Parenting skills
- Poverty
- Safe environment
- Sex education
- Substance abuse
- Teen pregnancy
- Transportation

What are the greatest health issues that negatively impact children?

- Access to health care
- Addiction
- Air quality
- Allergies
- Asthma
- Autism
- Bullying
- Dental care
- Diabetes
- Education/health literacy
- Environmental pollution
- Healthy food
- Homelessness
- Housing
- Mental health
- Obesity
- Physical activity/exercise
- Poverty
- Preventive care
- Respiratory issues
- Sexually transmitted infections
- Substance use (drugs and alcohol)
- Transportation

- Valley Fever

What is one thing we could do or one change we could make that would greatly improve the health and wellbeing of the community?

- Access to healthy food
- Access to pediatricians
- Affordable health care
- Affordable housing
- After school activities
- Ban smoking
- Control gang activity
- Dental care
- Drug treatment
- Education
- Gun control
- Housing
- Improve air quality
- Mental health resources
- Nutrition classes
- Parenting classes
- Prenatal care
- Preventive care
- Recreational activities
- Reproductive services

Which of the following are safety concerns within your community?

Drug use/abuse	81.0%
Burglary/theft	67.3%
Crime	65.6%
Alcohol abuse/misuse	64.9%
Gun violence	40.6%
Lack of public lighting	40.4%
Family violence	40.3%
Traffic/traffic accidents	38.5%
None of the above. I don't have safety concerns.	3.0%

Concerned and very concerned with these health issues

Violence/crime	77.7%
Lung disease/asthma/Valley Fever	75.8%
Mental health concerns (depression, anxiety disorder, suicide, etc.)	72.7%

Heart disease (stroke, heart attack, high blood pressure, etc.)	72.6%
Cancer	71.9%
Diabetes	71.5%
Overweight and obesity	70.7%
Substance abuse (tobacco, alcohol, drugs)	66.3%
Housing and homelessness	65.7%
Traffic accidents/fatalities	61.9%
Economic insecurity (not enough money each month to meet basic needs such as rent, food, clothing)	58.8%
Oral health/dental health	58.4%
Sexually transmitted infections (chlamydia, HIV, genital herpes, gonorrhea, etc.)	55.8%
Alzheimer's disease or dementia	51.6%
Mobility (ability to walk and easily move around)	51.2%
Food insecurity (scarcity/lack of regular access to enough nutritious food to support a healthy and active life)	50.6%
Bone and muscular health (arthritis, osteoporosis, etc.)	50.5%
Access to health care	48.9%
Birth indicators (low birth weight, premature birth, teen birth, etc.)	42.5%

Attachment 4. Resources to Address Significant Needs

Community stakeholders and residents identified community resources potentially available to address the identified health needs. This is not a comprehensive list of all available resources. Resources are also available at Healthy Kern County www.healthykern.org and 211 Kern County at <http://www.capk.org/211Kern/>.

Attachment 5. Report of Progress

DRMC developed and approved an Implementation Strategy to address significant health needs identified in the 2016 Community Health Needs Assessment. The hospital addressed: access to health care, cardiovascular disease, diabetes and sexually transmitted infections through a commitment of community benefit programs and charitable resources.

To accomplish the Implementation Strategy, goals were established that indicated the expected changes in the health needs as a result of community programs and education. Strategies to address the priority health needs were identified and measures tracked. The following section outlines the health needs addressed since the completion of the 2016 CHNA.

Access to health care

DRMC provided financial assistance to eligible patients who did not have the capacity to pay for medically necessary health care services, and who otherwise may not be able to receive these services. In FY17, DRMC provided \$674,654 in financial assistance and charity care, and \$9,480,261 in unpaid costs of care for Medicare and Medi-Cal patients.

Cardiovascular disease and diabetes

In an effort to address cardiovascular disease and diabetes, DRMC provided health education and conducted over 200 community health screenings for blood glucose, cholesterol, blood pressure, and body mass index. Free CPR trainings were also provided to community members at no cost.

In addition to health screenings, DRMC hosted several community farmers markets in partnership with the Community Action Partnership of Kern. These events provided families with free healthy produce and education to help establish healthier household diets utilizing fresh fruits and vegetables.

Monthly diabetic educational seminars were presented. These seminars focused on healthy eating, diabetic lifestyle tips, diet and exercise fundamentals.

Sexually Transmitted Infections (STI s)

The DRMC clinics, Delano Women's Medical Clinic, Wasco Medical Plaza, and Delano Urgent Care, provided education focused on STI prevention and family planning services. Over 2,000 free condoms were distributed.
